Kandil Egypt — Recruitment System Master Blueprint v2.3

Oct 7, 2026 · @Mohamed Omara

0. Document control

v2.3 is the single source of truth and supersedes v2.1, v2.0, v1.4, v1.3 and v1.2. v2.1 kept every v2.0 requirement and applied 18 corrections found by reading the full original design conversation line by line, not from model memory. v2.3 brings the document in line with the portal as built (v0.31.0, 7 Oct 2026): owner decisions CHG-61 to CHG-71, probation, medical insurance and KPIs as built (17.2, 17.3, 18), phase status (27) and the status of every requirement (29).

Change rule: no requirement is added, removed or reworded in code first. Every change gets a REQ ID, a source and a blueprint section here, then it is built.

#	Change	Source	Section
CHG-01	Headcount exception approvable only by HR Manager or CEO (removed from open items)	Owner decision, design chat	5
CHG-02	New Position: requester's management chain endorses (not approves); HR review; CEO final approval	Owner decision, design chat	3.4
CHG-03	HR Manager may edit defined request fields; requester notified of every edit and every approval step; request timeline	Owner's first brief + Module 1	4
CHG-04	HR Sector Manager role = Mohamed Omara; sole authority over grade, salary, benefits, working conditions	Owner decision, 30 Sep 2026	3, 19
CHG-05	Interview Question Bank linked to Competency Library; HR standard questions auto-shown in HR interview	Owner's first brief	11
CHG-06	JD outputs: view, print, PDF, email; ad templates per platform generated from JD; Apply link per ad	Owner's first brief + Module 2/3	3.3, 7
CHG-07	Candidate privacy notice acceptance on the application form	Module 3 design	9
CHG-08	Practical / technical Assessment stage added to the candidate journey	Owner decision, 30 Sep 2026	12

#	Change	Source	Section
CHG-09	One Vacancy per location: an approved request splits automatically into location vacancies	Owner decision, 30 Sep 2026	7
CHG-10	Offer validity date + audited extension; five-figure salary trail	Module 6 design	13
CHG-11	Deferred documents trigger HR alerts only; the system has no wage or payroll action	Owner decision, 30 Sep 2026	14
CHG-12	Behavior/Safety Issue restored to the probation performance log	v1.0 blueprint	17
CHG-13	Offer-decline, did-not-join and withdrawal reason lists restored	v1.4 blueprint	10, 13, 14
CHG-14	Phase-1 identity: personal Gmail + email OTP login; spreadsheet owner-only; Workspace migration path	Owner decision, 30 Sep 2026	2, 23
CHG-15	Baseline HC: every position loaded with Structural HC = 1 until a manpower plan exists; HC Basis flag; HC checks warn-only	Owner decision, 30 Sep 2026	2, 5
CHG-16	Payroll-sheet link deferred beyond Phase 1; Occupied HC maintained by HR until then	Owner decision, 30 Sep 2026	2, 5
CHG-17	Notification channel budget because of personal-Gmail sending limits	Technical constraint	2, 18
CHG-18	Requirements traceability matrix with stable REQ IDs	Audit recommendation	29
CHG-19	UX-001 and ACC-004 added: the portal follows the Performance Appraisal portal's design and spirit (greeting and progress message, «المطلوب منك», idle auto-lock, remember-me, friendly in-portal guide); login to be unified with the appraisal system later	Owner decision, 30 Sep 2026	23, 24, 29
CHG-20	Phase 2 simplification: a structural change approved by the CEO creates the position in the active org version and logs it in position history; full org-version snapshots are deferred	Build decision, Phase 2	3, 20
CHG-21	Internal transfer added: a vacancy can be filled by moving a current employee, and all movement between units follows one transfer process (MOV-001…004), spread over Phases 2, 3 and 6	Owner request, 30 Sep 2026	7.4, 27, 29
CHG-22	Structure editing screen added to Phase 2 (ORG-007), so future structural changes need no re-import; from Phase 3 on, data access is written as targeted queries to keep a later move to a real database (e.g. Supabase) cheap	Owner request, 3 Oct 2026	3, 23, 29

#	Change	Source	Section
CHG-23	Real structure reconciled from the requisition-form Jobs sheet and the Korn Ferry chart (Jul 2025): 285 positions, 77 units, 219 job titles in 21 families; new coding (ORG-008). Legal entities and sister companies (Enarat, Le Chateau) deferred to a later phase (ORG-009)	Owner decision, 3 Oct 2026	3, 29
CHG-24	Chairman and Vice Chairman added above the CEO (EXE-001/002, CEO EXE-003); board approval level added to requests and structural changes (BRD-001), with a rules screen for temporary board/CEO rules	Owner decision, 3 Oct 2026	6, 29
CHG-25	Phase 3A built (v0.3.0): person master with duplicate flagging, public apply page per vacancy (AR/EN, CV upload, consent, source from link), per-vacancy pipeline NEW→CONTACTED→SCREENING→SHORTLISTED + ON_HOLD/REJECTED/WITHDRAWN, activity log (void, never delete), next action + My tasks, message templates, internal-candidate manager notice at shortlist; hiring manager sees shortlist only (no salary/contact). Salaries asked with no 'prefer not to say' option, blanks allowed; national ID optional	Owner decision, 3 Oct 2026	8–10
CHG-26	HR Sector Manager's own request is approved on submission (line steps skipped, HR step recorded, classification = requested priority) except jobs reporting directly to the CEO, which still go to CEO and board	Owner decision, 4 Oct 2026	6
CHG-27	Overlapping saves fixed: sheet writes flushed before the lock is released, ID counters self-repair on upgrade, UI blocks a second click while saving	Defect, 4 Oct 2026	Technical
CHG-28	New look (v0.4.0): Kandil identity colors (red #A8111C, gold #C6A151), Almarai font (closest free to GE SS Two), type scale, and six status color families used everywhere: done, rejected/late, needs your action, moving, partial/escalated, neutral	Owner decision, 4 Oct 2026	UX
CHG-29	Locations: factories, admin building and each of the 15 branches as its own location; showroom positions sit under the branch group and every request line picks the branch (one vacancy per branch); branches managed from a screen	Owner decision, 4 Oct 2026	5, 6
CHG-30	Employment type Daily (يومية) added; portal skills scale kept; old sector-based job codes dropped	Owner decision, 4 Oct 2026	6

#	Change	Source	Section
CHG-31	Printed request copy (HR-REC-F02 v07) with a status stamp at print time and a watermark on non-final copies; every print audited; the old requisition form to be retired when the portal goes live	Owner decision, 4 Oct 2026	6
CHG-32	Agreed next steps, in order: employee master + end-of-service (occupied HC computed; resignation offers a ready replacement request; periodic reconciliation with payroll), job descriptions inside the system with the new-position process including the JD, English UI with per-user language control (user choice / forced Arabic / forced English), then Phase 3B	Owner decision, 4 Oct 2026	Roadmap
CHG-33	Employee master built (v0.5.0), in its own HR-only spreadsheet: bulk import from the reviewed appraisal mapping workbook (approved position + branch, per-employee override, managers' emails for portal accounts; never exits anyone missing from the file). After the first import, Occupied HC of every position is counted from active employees and can no longer be typed. End of service with a future last day keeps the employee counted until then and sends his nearest manager with a portal account a ready replacement request. Vacancy fills create, re-hire or move employees by code; voiding reverses them. Branch-group positions take a branch, or stay on the group for staff covering all branches	Owner decision, 4 Oct 2026	2, 5, 7
CHG-34	Job grades = Korn Ferry Job Level 1–15 (15 highest), loaded on 216 jobs (v0.5.1). Job descriptions built on a company competency library (core, leadership, functional by family; 4 proficiency levels; interview questions and practical tests) and seven job levels (worker → sector head); JDs written and approved by HR only, versioned; a request on a job without an approved JD shows a warning only. Pilot families: showroom sales/installation and production	Owner decision, 4 Oct 2026	3.3, 11

#	Change	Source	Section
CHG-35	Job descriptions built into the portal (v0.6.0): competency library tables, versioned JD per job code (draft → approved → superseded), bulk import of the reviewed workbooks as drafts and bulk approval, interview kit per job (questions by job level + practical tests) with print, JD print, JD status shown on hiring-request lines (warning only), request stores the JD version, new job from an approved new-position request starts with a JD draft. Pilot content: 18 showroom/installation JDs and 90 production JDs; review continues after load	Owner decision, 4 Oct 2026	3.3, 11
CHG-36	Job description content completed for all non-executive jobs: 110 further JDs written as draft 0.1 (finance 18, HR 13, IT and admin/security 13, legal/audit/OSH 7, commercial and marketing 19, operations leadership and factory support 27, supply chain 13), on top of the 108 pilot JDs — 218 in total. Competency library grows to 79 competencies with interview questions and practical tests (new functional groups FI, HR, IT, AD, LG, IA, OS, CM, MK, DS, MN, QA, PL, SC). All 218 JDs and the library import and approve cleanly in the portal. Each workbook flags points to confirm (grades of some supervisors, merged admin/security unit, missing grades for head of operations and customer follow-up specialist)	Owner decision, 4 Oct 2026	3.3, 11
CHG-37	English interface (v0.7.0): every screen can show in English, left-to-right, through a translation dictionary of 1,885 texts; master data shows its English name (_EN columns) when filled, otherwise Arabic. Each user switches language from the header (saved on their account); HR sets a user's language from Users; settings DEFAULT_LANG (ar/en) and USER_LANG_CHOICE (Y/N). Sign-in and notification emails go in the recipient's language. Arabic stays the default and is unchanged	Owner decision, 4 Oct 2026	3.1, 11

#	Change	Source	Section
CHG-38	Sources, subscriptions and job ads (v0.8.0, Phase 3B-1): RECRUITMENT_SOURCES table replaces the CANDIDATE_SOURCES setting (13 sources, migrated automatically). Paid subscriptions (SOURCE_SUBSCRIPTIONS) with ad and CV-search credit derived from a usage log (SOURCE_USAGE; cancelling returns the credit, nothing is deleted) and a daily expiry alert to recruitment managers. ADVERTISEMENTS per vacancy: text generated from the platform template (Purpose=AD, AD_<SOURCE>, fallback AD_GENERIC) + the approved JD + request data; statuses Draft, Ready, Published, Paused, Closed; first publish on a paid platform uses one credit or needs explicit confirmation without a subscription. Each ad has its own apply link (&ad=AD-…) and APPLICATIONS.Ad_ID records which ad brought each applicant. My tasks lists published ads on vacancies closed for applications. Screens are in Arabic and English	Owner approval to start Phase 3B, 4 Oct 2026	7, 8
CHG-39	Two phases added to the roadmap (scope to be detailed before each starts): Operational reports (after phase 5 — requests, vacancies, candidates, ads, offers, joiners; filters and export) and an Interactive process map (after phase 7 — clickable end-to-end map of the recruitment and new-hire process, each step showing owner, rules, SLA and the portal screen). Phase 8 Intelligence stays last	Owner request, 4 Oct 2026	Roadmap

#	Change	Source	Section
CHG-40	Decisions from the phase 1–3 audit: (1) approval reminders, escalation and daily digest run on a daily scheduled trigger; a request step left unapproved 30 days counts as rejected. (2) HC exceptions are approved by the HR Sector Manager only, as a separate approval. (3) HR notes on a request are visible to the HR team only (separate internal field). (5) Rejection reasons and activity types become editable lists. (6) Manual merge of duplicate persons is kept. (7) Data retention/deletion per the privacy text to be built; privacy text still awaits legal review. (4) Cancelling a vacancy requires a decision per open application: transfer / talent pool / reject due to cancellation / hold (built with 3B-3). (8) AI CV reading and summary help move to phase 8. (9) Agreed in principle: application owner with 3B-2; former-employee check, do-not-rehire and per-vacancy screening questions with 3B-3; candidate secure link with phase 5. (10) Admin screens for delegation, job/grade edit and reasons are built before 3B-2	Owner decision, 4 Oct 2026	2, 3, 7, 9, 10, 23

#	Change	Source	Section
CHG-41	CHG-40 items (1), (2), (3), (5) and (10) built in v0.8.1. Daily job on a time-driven trigger at DIGEST_TIME (first portal call of the day runs it when the trigger is missing or missed a day, without the digest): in-app reminder every APPROVAL_REMIND_DAYS (3), one escalation to the HR Sector Manager and HR Manager after APPROVAL_ESCALATE_DAYS (7), warning APPROVAL_EXPIRY_WARN_DAYS (5) before expiry, and a step without a decision for APPROVAL_EXPIRE_DAYS (30) is rejected by the system (recruitment requests and new-position requests); one digest email per user with approvals waiting or a request returned. EMAIL_DAILY_BUDGET now enforced (login codes always go). HC exception = separate step HC_EXC after HR review, HR Sector Manager only: approve, approve within available HC (lines cut to what is free, requester told), return or reject; skipped when HR approves within available; the HR Sector Manager reviewing as HR may record both approvals in one go (two records); his own request approves both on submission; the old HR Manager / CEO exception rules stopped. HR_Internal_Notes on the request: HR and recruitment roles only, never in the timeline, notifications or print; audited. Admin screens: delegation (unit-head approval authority to a user for up to one year; stop only), editable lists (request reject/return, candidate reject/withdraw, end-of-service reasons, candidate activity types; built-in items renamed only), job data and grade edit on the job page with change history (grade by the HR Sector Manager only). Item (7) data retention waits for the legal review of the privacy text.	Built, 4 Oct 2026	2, 3, 6, 9, 10, 18, 19, 23

#	Change	Source	Section
CHG-42	Phase 3B-2 built (v0.9.0). Application owner (Owner_User_ID): one recruiter per application from the vacancy team, default the creator or the lead; hand-over by the owner, the lead or a recruitment manager; applications of a recruiter removed from the team go back to the lead; My tasks follow the owner. Employee referrals (REFERRALS): referrer picked from active employees in the employee master, first referral per vacancy wins, no self-referral, PRIMARY on a referral source and INFLUENCING otherwise; bonus status PENDING (due after hire + probation) / REVIEW (HR decides: influencing, internal or candidate already applied within REFERRAL_PRIOR_DAYS = 180) / ELIGIBLE / NOT_ELIGIBLE / PAID, decided by HR admins in the referrals register; the portal pays nothing. A referrer typed on the public form waits for recruiter confirmation. Agencies (AGENCIES): fee basis and value, guarantee days, replacement terms, ownership days, contract link; terms snapshot on each submission; another agency cannot submit a candidate during ownership, other sources get a warning. Original_Source kept; source change needs a reason and is logged; source, agency and referral lock when the application is rejected or withdrawn (hire lock follows with phase 5). Existing applications migrated (owner = lead, original source, locks, typed referrers as REVIEW).	Built, 4 Oct 2026	8, 9, 10

#	Change	Source	Section
CHG-43	Phase 3B-3 built (v0.10.0). Screening questions (SCREEN_QUESTIONS): editable library seeded with 6 questions; each vacancy picks its questions and optional knockout answers; applicants answer on the public form; a knockout answer flags the application for review (never auto-rejects) and the recruitment team accepts or rejects it from the candidate page or My tasks. Talent pool (TALENT_POOL): candidates saved by category, suggested when a matching vacancy opens, moved to a vacancy in one step. Transfer to another vacancy creates a linked new application (Origin_Application_ID) and closes the old one as withdrawn - transferred. Cancelling a vacancy with active candidates requires a decision per candidate (transfer / pool / reject / hold). Bulk import (IMPORT_BATCHES): paste from Excel, max 300 rows, preview flags new / possible duplicate / already on vacancy / missing mobile / invalid / duplicate in file, per-row link / new / skip, batch number IMB-YYYY-NNNN. Source performance tab: applicants and reach to interview, offer and hire per source. Former employees: name/mobile match against exited employees shows a warning that HR confirms or dismisses; no-rehire restrictions (HIRING_RESTRICTIONS) recorded with a reason by HR admins only; any application by a restricted person alerts the managers, who decide.	Built, 4 Oct 2026	8, 9, 10

#	Change	Source	Section
CHG-44	Phase 4 split: 4A interviews (built, v0.11.0); 4B practical / technical assessments, 2-hour reminders and reconfirmation, interviewer analytics and per-job round templates. 4A: interview rounds per vacancy (Plan_JSON, default INTERVIEW_DEFAULT_PLAN = HR required, direct manager technical required, senior final optional; type HR / MANAGER / SENIOR / OTHER drives the competencies and questions shown). New stage INTERVIEW, entered only by scheduling the first interview; the hiring manager sees SHORTLISTED and INTERVIEW candidates. INTERVIEWS + INTERVIEW_PANEL (one lead; technical, HR, observer, decision participant): Proposed → Manager Confirmed → Candidate Pending → Confirmed → Checked-in → Started → Completed → Evaluated; the invitation is blocked until the lead confirms (INT-001); exceptions manager / candidate declined, rescheduled (linked), no-show, manager no-show, cancelled, controlled ad-hoc with reason, round waived by recruitment managers / HR with reason; closing or transferring a candidate cancels live interviews. Check-in, screen opened, first note, start, end and each evaluation are recorded as events; evidence reported as facts (waiting minutes, late arrival, duration). Interviewer workspace: candidate summary (no salary / contact outside the recruitment team), CV through the interview, approved JD, round competencies with anchors and library questions, HR standard question bank (INTERVIEW_QUESTIONS, 10 seeded, mandatory or suggested), requirements from the request (education, experience, essential skills). EVALUATIONS: requirements Met / Not met / Needs verification with evidence (all required in HR and manager rounds), competencies 1–5 against the required level (evidence for 1 and 5), mandatory questions must be asked, interviewer-added questions, recommendation Strongly proceed / Proceed / Hold / Do not proceed; independent (hidden while the user still owes an evaluation on that candidate); revision = new version with reason, old superseded; late after EVAL_SLA_HOURS (24) measured. Live comparison and readiness (not ready / ready for decision / deferred): incomplete as x/y, conflicting recommendations flagged never averaged, competency averages with rater count and spread, requirements by worst status; salary only	Built, 4 Oct 2026	11, 20, 27

#	Change	Source	Section
	for the recruitment team. Daily job: unconfirmed after INTERVIEW_CONFIRM_HOURS, tomorrow reminders, unrecorded past interviews, late evaluations with escalation to recruitment managers at 2× SLA. Selection decisions (selected / reserve) stay with phase 5.		
CHG-45	v0.11.1 — fixes accepted from an external code review (Gemini, all 29 files in five parts; about a third of its points held, no authorization gap found). Text starting with "=" is stored with a look-alike sign so it can never become a sheet formula (public apply page, import, every write). Login-code attempts counted and checked under the lock. Audit trail, timeline events and notifications are appended without reading the whole table; the ID counter is not re-read inside the same lock. Unit move checked under the lock and tree walks guarded against loops. CVs uploaded to Drive before taking the lock. Online applications capped per vacancy per hour (APPLY_MAX_PER_VACANCY_HOUR = 60; lead recruiter told). Former-employee name match uses four words when both names have them. Weekly days off WEEKEND_DAYS = Friday and Saturday: no reminders, escalations or digest on those days, and they do not count in approval waiting days or evaluation lateness. Every data sheet warns before a hand edit. New automatic XSS test: HTML/script typed into names, notes, questions, round names and summaries shows as text on every screen and never runs. Deferred: data archiving (with the retention decision CHG-40/7), splitting Index.html (with the move to a real database).	Built, 5 Oct 2026	18, 22, 23
CHG-46	v0.12.0 (Phase 4B): practical / written / skills assessment rounds with criteria from the JD and competency tests; HSE safety checklist before shop-floor tests; result form (pass/fail per item, optional score out of 100, evidence files, PASS / FAIL / RETEST) — a fail flags the candidate and never auto-rejects; round templates per job / job family, vacancy plan frozen at its first interview; day-before reconfirmation; hourly job for 2-hour panel reminders + candidate reminder email; interviewer analytics for calibration only.	Built, 2026-10-05	Interviews & assessments; Notifications; Settings

#	Change	Source	Section
CHG-47	v0.12.1: fix for 'system busy' at login after an upgrade — the in-request upgrade no longer re-formats or re-protects existing sheets (protection runs once from the daily job); other users see 'portal is updating, try again in a minute' instead of queueing on the lock; a stuck upgrade is retried after 6 minutes.	Built, 2026-10-05	Google Apps Script architecture
CHG-48	v0.13.0 (Phase 5A): selection decision (selected / reserve / hold / more interview / rejected) with readiness snapshot and exception justification; hiring manager may decide (not reject); optional reference checks with consent; versioned salary structures per grade, pay components (fixed / variable, show-on-letter) and OFFER_AUTHORITY matrix edited by the HR Sector Manager; offers with calculated fixed package, lowest-sufficient-authority routing with fallback, self-approval within own limit, return, negotiation versions, salary trail, offer letter (print / email), acceptance with signed copy, decline reasons with reserve reminder, validity + daily expiry + HR extension, over-hiring check with HR override; salaries hidden from hiring managers; new stages OFFER and ACCEPTED. Joining and documents follow in 5B.	Built, 2026-10-05	13.1–13.5; 20; 21; 24
CHG-49	v0.13.1: offers follow Kandil's package rules (owner decision 2026-10-05) — the offer starts from the agreed amount (Gross or Net); allowances come from a versioned per-grade table (collar W/B/G, transport: Inshas = first column, elsewhere = first + extra; meal, phone, representation, cost of living, job-nature eligibility) and per unit/department job-nature rates (2026), with per-job overrides, location transport zones and temporary transport by decision; basic = amount − allowances; contribution wage = full × 60% capped 16,700, rounded to 500, floor 5,500 (social insurance 11%); comprehensive wage = contribution wage topped up to 7,000 (tax base after insurance and the 20,000 exemption, progressive brackets); martyrs fund borne by the company; Net contracts grossed up with the difference as «Net allowance»; incentive as a separate annex decided only by the HR Sector Manager. All figures editable yearly from the Salaries & offers screen.	Built, 2026-10-05	13.2; 13.3; 13.4

#	Change	Source	Section
CHG-50	v0.14.0 (Phase 5B): joining and hiring documents (owner decisions 2026-10-05) — an accepted offer opens a joining record (planned date with change history, date confirmation notifies the manager); 12 document types seeded (original kept / copy / paper, copies, scope all / males / collar / listed jobs, digital copy, expiry, deferrable with max days, insured-only); the candidate uploads from a private link or HR uploads, the recruiter reviews, paper receipt ticked separately, versions kept per person on Drive; deferral and waiver by the Recruitment Manager; joined → vacancy fill + employee record, did not join → withdrawn with reason; the receipt of hiring documents prints only when every required document is complete; payroll cut-off day 25 with a 7-day alert — the portal lists and records stop / release notices, it never stops a salary itself; contracts without social insurance need the CEO or the Chairman / Vice Chairman, insurance is zero and the work stub, insurance print, form 111, practice permit and skill certificate become optional (recorded if brought).	Built, 2026-10-05	14; 13.4
CHG-51	Owner decisions: probation is at most 90 days with the same employer, never repeated on rehire; STEPS HR & Payroll not approved, so phases 6 and 7 (employee file, onboarding, social insurance, probation, medical insurance) are built in this portal, and a full HR system follows later as a separate project.	Decided, 2026-10-05	17.2; open items 11, 14
CHG-52	Owner decisions: the 4 legal entities count as one employer, so probation is never repeated on rehire or on a move between entities. Probation: at most 3 months; once per employer; the contract must state the probation and its length (offer / contract carries the probation days); either party may end the contract during probation, usually without compensation or end-of-service pay. Social insurance: legally due from the first working day; the company may start it from the 1st of the following month or from the date the hiring documents are complete (especially form 111) — the portal will hold the start rule as a setting and track it per employee. Privacy notice to be drafted externally and reviewed before legal sign-off.	Decided, 2026-10-05	17.1; 17.2; open items 11, 12

#	Change	Source	Section
CHG-53	v0.14.1: personal-data protection (privacy notice drafted externally, reviewed; final wording awaits legal). Separate recorded consents with the notice version (application, storage on Google possibly outside Egypt, salary data as sensitive financial data, optional talent pool for RETENTION_POOL_MONTHS = 12); talent pool only with consent; explicit hiring-documents consent (link or signed paper) before the first upload; criminal record and form 111 open for the application owner and HR / recruitment managers only; legal entities linked to the structure and shown as employer (more can be added later); data-subject requests (access export, correction, deletion, pool withdrawal) with a due date; retention list (rejected 6 months, did not join 3 months — periods editable, owner to decide) with manual deletion, automatic deletion off until the HR Sector Manager switches it on; DPO = wages supervisor, privacy email to be set. Hiring-document files are kept (owner decision). WhatsApp contact from company numbers. Open: move from a personal Google account to Workspace or Supabase before real candidate data.	Built, 2026-10-05	9.1; 14; open item 12
CHG-54	v0.15.0: sign-in with an authenticator app (TOTP) as an alternative to email codes; once on, email codes stop for that account (also saves the Gmail daily quota). Required from the first sign-in for system owner, HR sector manager, HR manager / staff, recruitment team and consultant (TOTP_REQUIRED_ROLES); everyone else after 3 email sign-ins (TOTP_AFTER_EMAIL_LOGINS). QR drawn on the device, 8 one-time recovery codes, secret stored encrypted, codes not reusable, 15-minute pause after 5 wrong codes. Reset by system owner / HR sector manager with a reason (closes sessions); emergency owner reset from the script editor via a script property. New role Consultant (view only): sees every screen including pay (owner decision), server refuses all writes, alone, end date (max 180 days), no position, granted by owner / HR sector manager, confidentiality acknowledgement at first sign-in (interim text, final after legal). Notes button on every screen + Notes screen (status and reply, author notified). Decision: the 'twice a day' rule replaced by role-based enforcement.	Built, 2026-10-06	9.1; open item: consultant acknowledgement wording (legal)

#	Change	Source	Section
CHG-55	v0.15.1: short 'for whom / where to start' intro under 24 screen titles, closed and reopened per user (saved per account). Owner and HR sector manager can switch on coloured dots showing who sees each menu item (everyone / managers and approvers / HR and recruitment team / HR sector manager and system owner only) with a legend; one meaning per visual channel so it does not clash with the planned org-chart status colours. Guide answers on the authenticator and notes. Agreed order after this: v0.16 org chart (headcount status colours + sector colours, 8 sectors), recruitment policy inside the portal after the owner approves the draft, then phase 6 onboarding as a full in-portal program.	Built, 2026-10-06	9.1; phase 6 order
CHG-56	v0.16.0: Org chart screen. Tree of the active structure; every card shows actual / approved headcount including everything below it. Card fill = headcount status per position (over approved / short / full / empty), always with number and icon; units also show counts of over, short and empty positions below them. Top band = sector colour (fixed palette in sector order, override per sector in SECTOR_COLORS); departments take their sector's colour. 'On the way' = remaining headcount of open vacancies, with new hires waiting to join. By unit / by position view, sector filter, status filter (dims the rest), search by unit, position or holder name that opens the path, open / close all, zoom and fit, print A4 landscape, unit details with its positions and holders. Visibility: HR, recruitment, CEO, board, consultant, viewer = whole company; a line manager = his units only; others refused. Phone = indented list.	Built, 2026-10-06	4 (structure); 9.1

#	Change	Source	Section
CHG-57	v0.17.0 (phase 6A): full onboarding program inside the portal + employee e-file. Owner decisions: full program (not a simple record); three templates are enough (factory / showroom / office, chosen from the location type; factories and warehouses = factory); task owners = HR site specialist, recruiter, supervisor and line manager (plus the buddy); social insurance starts on the first working day by default (setting comes in v0.18). Templates hold phased activities (before day one / day one / first week / first month) with a day offset, owner role and employee-acknowledgement flag; editable and copyable by system owner, HR sector manager and HR manager. A program opens when the joining date is confirmed; tasks are dated from the start (weekly days off moved) and assigned to real users (HR site specialist per location, vacancy lead recruiter, reports-to holder, unit head, buddy or the supervisor until a buddy is set). Date changes re-date open tasks; joined links the employee and re-dates to the real first day; did-not-join cancels. Done / won't do (reason) / reopen; flagged tasks need the employee's acknowledgement; manager or supervisor sets the buddy and adds tasks; HR changes owners (open tasks move); program closes with the employee's acknowledgement (paper / in person / none with a reason), HR may close earlier with a reason; print for signature; daily one-time late reminders; home to-do. Program by hand for current employees. Employee e-file: hiring record, hiring documents and their status, onboarding progress, agreed package for pay roles.	Built, 2026-10-06	Phase 6; 9.1

#	Change	Source	Section
CHG-58	v0.18.0 (phase 6B): welcome gift, social-insurance tracking, New Hire Voice. Gift: recorded on the onboarding program (choice list WELCOME_GIFTS, delivery date, by whom, employee signature) by HR, manager or supervisor. Insurance: one case per new hire opened on joining; start per INSURANCE_START_RULE (owner decision: first working day by default; alternatives next month / documents complete, the latter set when the documents receipt is issued); office per location (INSURANCE_OFFICES list, 13 offices to be entered); to submit → submitted (date, request ref) → registered (insurance number, unique); no-insurance contracts marked; late after INSURANCE_SUBMIT_DAYS = 7 (interim, to confirm with the insurance officer) with one alert to HR managers and the site specialist; HR roles only. New Hire Voice: surveys at day 7 and 30 (NHV_DAYS) on a private no-login link (Voice.html, Arabic / English, phone first), emailed when the person has an email, otherwise the HR site specialist sends it by WhatsApp and marks it sent; 5 default questions (1–5 + comment, editable in NHV_QUESTIONS); answers visible to HR team and recruitment manager only, never to the line manager by name; averages per question per round; any score at or below NHV_ALERT_SCORE = 2 alerts the site specialist and HR managers and stays in the to-do until a follow-up note is recorded. Employee e-file shows insurance and survey status.	Built, 2026-10-06	Phase 6; 9.1; open: insurance submit days, offices list

#	Change	Source	Section
CHG-59	v0.19.0 (phase 6C): internal transfers, per the owner's rules. Opened by the employee's current manager or anyone in the HR team (one open request per employee). The target must have room: free approved headcount or an open vacancy; when a vacancy exists the transfer is linked to it and fills / closes it on execution (recorded as internal transfer); room is reserved while the request is open. Approvals: current manager → new manager → HR manager → HR sector manager when salary items change (requester steps auto-approved, empty steps skipped with reason; reject with reason). Allowances tied to the job or the unit (grade, collar, transport zone, job-nature rate) are detected and force a salary-items change (items from → to, or a note); agreed different benefits can be added; amounts visible to HR and pay roles only. Working-hours and location changes recorded (history note). Executed on the effective date (immediately if due, else by the daily job); headcount recounted; managers notified; printable salary-items notice for payroll with a 'sent to payroll' record. Not built (owner did not ask): short onboarding for the new unit.	Built, 2026-10-06	Phase 6; 9.1

#	Change	Source	Section
CHG-60	v0.20.0: demo data + wipe transactions (owner request: test every case with non-real data in the same portal, then empty it). Owner-only screen. Seeding in 7 ordered stages through the real services on the real structure: demo users (HR, recruitment, managers placed on unit heads with no account) and demo employees (short/full/over/empty headcount); requests in every state, vacancies, new-position request; candidates in every stage + a duplicate; interviews (upcoming, done, late evaluation, no-show), evaluations, selections; offers (accepted, presented, declined, pending, draft); joining with missing/deferred/rejected documents, onboarding, gift, insurance, surveys (good and low), did-not-join; transfers in every state, personal-data requests, an exit. Demo people use @demo.invalid; no email at all is sent while seeding. 'Try as' lets the owner open the portal as a demo user (yellow banner, back to own account, audited). Wipe: typed phrase + reason + authenticator code; copies the 7 spreadsheets to a Backup folder first; clears every transaction table (real and demo), removes demo users/employees, restarts counters, recounts or restores headcount, trashes uploaded files; keeps structure, jobs, JDs, locations, real users/roles/MFA, real employees and history, settings, lists, pay tables, templates, notes, audit log.	Built, 2026-10-06	Testing / go-live
CHG-61	Probation is one period only, at most 90 days (PROBATION_DAYS), with no extension. The direct manager sets 3–5 measurable goals in the first week and the employee acknowledges them; follow-up reviews on day 30 and day 60; self-assessment, then the final evaluation on day 75 on the annual appraisal items (productivity 35%, quality 25%, four core values 10% each, 1–5 with evidence; confirming needs a weighted score of 3 or more and no value below 2). An improvement plan (PIP) must start by day 60 so it ends inside the period. The manager recommends; HR decides by day 80: confirming = HR team, ending employment = HR Sector Manager only, with written reasons; the decision is told in a meeting, then a printed letter. Built v0.25.0.	Owner decision	17.2, 26

#	Change	Source	Section
CHG-62	Stay interview near day 60: HR with the employee, without the manager (what he likes, what could make him leave, manager support, intent to stay, risk level); a high risk alerts the HR managers and the HR site specialist; HR only. Manager satisfaction survey: 3 questions to the direct manager after confirmation, feeding the quality-of-hire KPI. Built v0.26.0.	Owner decision	17.2, 18
CHG-63	Medical insurance case opened automatically on confirmation; the employee is added within MEDICAL_ADD_DAYS (14) with insurer and card number, or marked not added with a reason; late cases alert HR; HR team only. Built v0.25.0.	Owner decision	17.3
CHG-64	Recruitment KPIs computed from the portal's own records: process KPIs in 5 groups (speed, quality, efficiency & cost, candidate experience, compliance); weighted scorecards (weights sum to 100, score 1–5 on the appraisal scale) per recruiter, recruitment lead and HR site specialist; service KPIs of managers, approvers and interview panels for information only (not in any score); drill-down to cases, Excel export, monthly e-mail to the recruitment manager, HR manager and HR Sector Manager. Built v0.26.0.	Owner decision	18, 26
CHG-65	KPI targets, target days-to-fill per job class, job class per grade and scorecard weights are edited on the KPI screen (no JSON typing) by the system owner, HR Sector Manager and HR Manager only, each change with a reason and audited; the rest of HR / recruitment and the consultant view only. Built v0.27.0.	Owner decision	18, 19, 26
CHG-66	Every user sees his own evaluation ("My evaluation"): the scorecards that apply to him and his service as manager, approver and evaluator, with only his own cases behind them. The probation employee sees the day-30 and day-60 follow-ups on his link once the manager saves them, and the final evaluation only after the HR decision; internal notes, the stay interview and the manager survey are never shown to him. Built v0.27.0.	Owner decision	17.2, 18, 19

#	Change	Source	Section
CHG-67	Every form is printable from inside the program: a print button in every form window and beside each page title prints the form with its data, blank lines for empty fields, logo, date and a signature table. A forms book holds every portal form on demo data, in workflow order. Built v0.24.0–v0.26.0.	Owner decision	24, 27
CHG-68	Post-approval request changes: only a headcount increase goes back to approval (as a linked request that tops up the same vacancy); every other change (date, specs, priority, employment type, branch, decrease) is recorded by HR with a reason as an amendment version. Bulk vacancy assignment and moving a recruiter's whole workload. Approved JD e-mailed with PDF to portal users only (not candidates). Application salary stays optional for everyone, not labelled optional, zero refused.	Owner decision	4.4, 7.2, 3.3, 9.3
CHG-69	Phase 8 first part built: source return (funnel to confirmation, quality, time to hire, cost per hire incl. ads, subscriptions spread over the period, agency fees, referral bonus estimate), bottlenecks (each process step with average / median / 90th percentile, waiting, overdue, slowest people, oldest cases) and interviewer calibration (deviation from the rest of the panel, recommendation vs outcome, interview score vs final probation score). Forecasting waits for ~6 months of data; AI CV help waits for an owner decision on the AI service.	Owner decision	18, 27
CHG-70	Go-live readiness screen (automatic checks + manual items ticked and audited) and the hiring forecast (next quarter by job class and sector, expected time to fill, confidence by months of history).	Owner decision	18, 27

#	Change	Source	Section
CHG-71	AI CV reading (Claude, Anthropic API): on the candidate page the recruiter asks the system to read the CV (PDF, image or .docx) against the vacancy's approved JD; it returns suggestions only — fields the recruiter ticks to save (audited), a short summary, skills, and a 1–5 match on job-related criteria (age, gender, religion, marital status, nationality, photo excluded). Never moves or rejects a candidate. One reading per CV per vacancy (saved), monthly cost cap CVAI_MONTH_CAP_USD (default US$10, ~1 cent per CV on Claude Haiku 4.5), API key kept in the script properties, readings blanked when a candidate's data is deleted. Owner decision; cross-border transfer of CV data to go to the lawyer review.	Owner decision	13, 29

1. Purpose, scope and principles

The system is a recruitment and new-hire portal covering Workforce Need → Recruitment Request → Vacancy → Candidate → Assessment/Interview → Offer → Joining → Onboarding → Probation → Medical Insurance → Quality of Hire. It is not a payroll or wage system and takes no action on pay.

Non-negotiable principles:

- Job, Position, Employee and Vacancy are separate entities. Person is the durable identity behind Candidate and Employee profiles.
- Candidate ≠ Application. One person can have many applications over years, become an employee, leave, and apply again.
- Business rules live server-side. The UI is never the authority for permissions, approvals, headcount or salary rules.
- Approved records are versioned. Material changes use a Change Request or new version, never a silent overwrite.
- Control without blocking legitimate work: real exceptions go through a controlled override with authority, reason and audit.
- A missing Recruiter, Supervisor, Recruitment Manager or organizational level never freezes work; fallback rules resolve authority and record the skip.
- Every Application has a mandatory Recruitment Source.
- Several recruiters may work one Vacancy; every Application has exactly one Current Owner.
- Filled HC changes on Actual Joining, not on Offer Acceptance.

- AI assists with summaries, evidence extraction and classification. It never rejects, ranks or selects candidates on its own, and a human reviews every AI text before it becomes a record.
- Timestamps are evidence, not accusations.
- The first screen for every operational user answers: what requires my action today?

2. Operating context and Phase-1 constraints

Phase 1 runs on personal Gmail accounts, a Google Sheets data store and about 45 users, with a planned later move to Google Workspace. These constraints shape the architecture and are requirements in their own right.

Area	Phase-1 decision	Consequence for the design
Identity	Personal Gmail; Apps Script cannot reliably identify users without Workspace	Login by one-time code sent to the user's registered email; server-side session token; user must exist and be Active in USERS
Data protection	Web app executes as the owner; the spreadsheet is shared with nobody	All reads/writes go through the web app; no one edits sheets directly, including HR
Workspace migration	Planned, date not set	AuthService is a swappable adapter; moving to Workspace replaces only that module
Users	~40 managers + 5 HR at launch	Session validity ~14 days per device keeps login emails low
Email budget	Personal Gmail script sending is limited (order of 100 recipients/day)	In-app Action Queue is the main channel; email only for OTP, urgent alerts and one daily digest
Org structure	Complete to the last level	Loaded into ORG_UNITS / POSITIONS in Phase 1
Approved HC	Does not exist yet	Every position is loaded with Structural HC = 1; HC Basis = Baseline (temporary) until a manpower plan exists
HC enforcement	Data still being verified	HC checks warn, never block, until switched on in configuration

Area	Phase-1 decision	Consequence for the design
Occupied HC	Payroll is kept in a Google Sheet	Phase 1: entered by HR per position (optional, default 0). Later phase: read-only import of non-salary columns from the payroll sheet
Payroll link	Key risk: name mismatches between payroll and structure	Deferred. When built: a Position ID column in the payroll sheet, or a mapping table with mismatch report
Wages	Out of scope	No module computes, holds or deducts pay

The exact Gmail sending quota must be checked against Google's current limits before go-live.

3. Organization, Job, Position and Structural Change

Recruitment can only target a Position that already exists in the approved structure; anything else is a Structural Change first.

3.1 Entities

- **Job** — what the role is: code, title, family, level, grade reference, structured JD, qualifications, experience, skills, competency profile, working conditions, effective dates.
- **Position** — where the job sits: Position ID, Job Code, company, sector, department, section/sub-unit, Reports-To Position ID, one location, grade reference, Structural HC, HC Basis, status (Active / Frozen / Closed), effective dates. Occupancy (Fully / Partially Occupied / Vacant) is derived, not a status.
- **Employee** — the person occupying a position.
- **Vacancy** — an approved need to fill HC against one position at one location.
- One Job can have many Positions (e.g. Sales Representative in Obour, Hurghada, Export).

3.2 Versioning

The organization is versioned (e.g. 2026.01 → 2026.02, each with effective date, approval date, approver, change description). Closed positions stay in history. Acting/delegation changes approval authority for a period without rewriting the chart.

3.3 Structured JD and its outputs

The JD lives in the system as structured data: purpose, responsibilities, authority, KPIs, qualifications, experience, technical skills, behavioral competencies, working/physical conditions, reporting relationship. It is versioned; offers and hires keep the JD version valid at the time.

From the same source the system produces:

- JD view, print, PDF download and email from inside the system
- Approved JD can be e-mailed from the portal with a PDF to portal users only (up to 10 per send, audited); not sent to candidates.
- Recruitment advertisements per platform (section 7)
- Interview guide and question set (section 11)
- Probation evaluation template (section 17)

3.4 Structural Change (New Position) Request

1. The requesting manager submits: proposed title, department, section, reporting-to, number of positions, business justification, proposed qualifications and responsibilities.
2. The requester's management chain **endorses** the request (support, not approval) — e.g. Department Manager, then Sector Manager.
3. HR reviews organization impact, job architecture, grade, salary, reporting line and manpower, and records a recommendation.
4. The CEO gives the final structural approval.
5. A new organization version is created; the Position ID is generated on approval, not on request.
6. The position becomes selectable and a normal Recruitment Request can follow.

The requester never sets grade, salary, benefits or working conditions.

3.5 Protected job architecture

Grade, salary structure, benefits and working conditions are read-only for requesters, managers, recruiters and the HR Manager. Only the **HR Sector Manager (Mohamed Omara)** can change them, and every change is versioned and audited.

4. Recruitment Request

A manager requests HC only for positions inside his organizational scope, validated server-side; one request may cover several locations of the same job through request lines.

4.1 Fields

Group	Content
Identity	Request ID/version; requester auto-derived from login (employee ID, name, title, org unit); Submitted By; submitted date
Job	Job Code, Job Title, Sector, Department, Section, Direct Manager / Reports-To, Grade (read-only), JD version
Request lines	One line per Position/location: Position ID, location, Current HC, Structural HC, Open Recruitment HC, Available HC, Requested HC, Approved Number Required
Need	Recruitment Type: Replacement / Additional HC / Backfill–Planned Vacancy / Temporary
Timing	Proposed Hire Date / Required-By Date
Employment	Employment Type, Work Model, shift pattern / working hours
Priority	Requested Priority + reason (proposal only)
Justification	Reason category (increased workload, replacement, new business, new project, organizational change, productivity, other) + details; attachments linked to the request
Replacement	One or more replaced employees: ID, name, position, last working date, reason
Requirements	Baseline education, specialization, experience context + years, skills with required proficiency and Essential / Additional flag, request-specific notes
Role content	Duties & responsibilities and working conditions pulled from the linked JD version

Group	Content
HR review	Status, HR Notes, Reviewed By / Date

4.2 HR Manager review powers

The HR Manager can Approve, Reject, Return for Revision, Edit, or Send to CEO. Editable fields: Approved Number Required per line, Employment Type, Required-By Date, HR priority classification, requirements, JD version. Not editable: grade, salary, benefits, working conditions (section 3.5).

Every HR edit is shown to the requester as old → new with the reason, and is stored in the approval snapshot.

4.3 Requester notifications and timeline

The requester is notified in-app (and by email where the channel budget allows) on: submission received, each approval step, return with reason, rejection with reason, any HR edit, routing to CEO, approval for recruitment, vacancy creation, and each joiner against the request.

Every request has a timeline showing each event with actor, date/time and comment. The manager's home screen lists My Recruitment Requests with status and required date.

4.4 Return and change control

Return for Revision keeps every prior version and the exact submit / return / resubmit timestamps. Material changes after approval (HC, position, location, employment type, required date) create a Change Request, an impact assessment and reapproval where required.

As built (v0.28.0): after approval, only a headcount increase goes back to approval, as a linked request that tops up the same vacancy. Every other change (date, specs, priority, employment type, branch, headcount decrease) is recorded by HR with a reason as an amendment version of the request.

5. Headcount rules

A manager may request any number; HC above Available becomes a Headcount Exception that only the HR Manager or the CEO can approve.

Metric	Definition
Structural HC	Approved HC for the Position. Phase 1: 1 for every position (temporary)
HC Basis	Baseline (temporary) or Approved Manpower Plan; reports separate the two
Occupied HC	Employees currently in the Position; Phase 1 entered by HR (default 0), later imported from payroll
Open Recruitment HC	Approved, still-open vacancy quantity against the Position
Available HC	Structural − Occupied − Open Recruitment
Requested HC	What the manager asked for; may exceed Available
Approved Number Required	What was approved; stored separately from Requested
Joined / Filled HC	Actual joiners only

Rules:

- Current and Available HC are shown to the manager for guidance; they never block submission.
- Requested > Available → Headcount Exception: justification mandatory; approver = HR Sector Manager only (CHG-40/2); recorded as its own approval (available, requested, exception HC, approver, date, reason).
- Multiple open requests on one Position never double-count capacity.
- Accepted and pending offers are shown as exposure, not as Joined HC.
- Partial fill is supported; a vacancy stays open until joined HC reaches the approved number or an approved change closes the balance.
- Phase 1: HC checks warn only. Blocking behavior is a configuration switch, turned on after the HC data is verified.

6. Approval, authority, delegation and priority

Approval chains are derived from the organization structure at run time, never stored as fixed names on the request.

6.1 Recruitment Request chain

- Normal: Section Head (requester) → Department Manager → Sector Manager → HR Manager.
- Department without sections: Department Manager (requester) → Sector Manager → HR Manager.
- A missing level is skipped to the next valid authority, and the skip is recorded.
- Sector Manager position vacant → HR Manager or CEO, per configured fallback.
- Request for a Sector Manager position: requester = HR Manager, approver = CEO.
- Self-approval is blocked; the resolver finds the next valid approver.

6.2 CEO approval

CEO approval is rule-based, not universal. The HR Manager can route any request to the CEO (status Pending CEO Approval). The CEO can issue effective-dated rules by job, department, sector, request type or priority (e.g. all Production requests until 31 Dec). Rules live in AUTHORITY_RULES, not in code.

6.3 Delegation

Acting / delegated authority has From, To, authority, reason and effective dates. Each delegation is a new record; old ones are never edited.

6.4 Approval snapshot

Every decision stores the entity, version, required authority, assigned approver, decision, timestamp, comment and a snapshot of exactly what the approver saw.

6.5 Priority

Layer	Owner	Purpose
Requested Priority	Requester	Proposal with reason
HR Classification: Normal / Important / Critical	HR Manager only	Official importance; every change logged with reason
Dynamic Priority Score	System	Daily work order: classification + aging (in bands) + Required-By urgency + configured impact factors
Temporary Override (Pin / Expedite)	HR Manager only	Reason + Effective From / To; expires automatically

An old Normal vacancy can outrank a new Critical one. Classification and score are always shown together, and score history is kept. Weights are configured and tested on 20–30 sample requests before go-live.

7. Vacancy, recruiter team and advertising

An approved request creates one Vacancy per request line, so each location is tracked, staffed and closed on its own while staying linked to the same request.

7.1 Vacancy

- Example: REQ-2026-0045 approved for 5 (Obour 3, Inshas 2) → VAC-…-A Obour, HC 3 and VAC-…-B Inshas, HC 2.
- Fields: Required HC, Joined HC, Remaining HC (derived), Recruitment Start Date, status, HR classification, dynamic score, Lead Recruiter.
- Vacancy Age starts at Recruitment Start Date, not request creation.
- Statuses: Approved, Recruitment Preparation, Open, On Hold, Partially Filled, Filled, Closed, Cancelled, Frozen.
- The request closes only when all its vacancies are Filled, Closed or Cancelled.
- HC change after recruitment starts shows impact (joined, accepted and outstanding offers, final-stage candidates) before approval.
- Cancellation requires disposition of every open application: Transfer / Talent Pool / Reject due to Cancellation / Hold.

7.2 Recruiter team

- Vacancy ↔ Recruiter is many-to-many: one Lead Recruiter + assigned recruiters.
- Each application has one Current Owner; reassignment history is immutable (from, to, by, date, reason).
- Inactive recruiter → active work moves to an Unassigned Work Queue for bulk reassignment.
- Vacancies can be assigned to recruiters in bulk, and all of one recruiter's work can be moved to a colleague with the same roles; candidates and next actions follow, with one notification per person.
- Before contacting a candidate, the recruiter sees the latest contact and who made it.

7.3 Advertising

- Advertisement is a first-class record: Ad ID, vacancy, platform, campaign / sub-source, content version, publication and closing dates, URL, cost / credit used, posted by, updated by / date.
- Statuses: Draft, Ready, Published, Paused, Closed. Copy Advertisement reuses an ad without changing the original.
- Ad text is generated from the JD + vacancy details through a template per platform (LinkedIn, Facebook, Wuzzuf, company website, internal, WhatsApp, other), then edited and copied by the recruiter.
- Ads never carry a recruiter's personal number; each ad carries an Apply link that opens the application form and attributes the source and ad automatically.
- Ad publication consumes subscription credits (section 8).

7.4 Internal transfer and employee movement (v2.2)

A vacancy can be filled by moving a current employee instead of hiring, and every movement between units follows one controlled transfer process that keeps headcount right on both sides.

Filling a vacancy by internal transfer

- Every vacancy fill records its method: External Hire or Internal Transfer.
- Phase 2 (built in v0.2.0): the recruitment team records each person who fills the vacancy — External Hire or Internal Transfer, name, employee ID, effective date and, for a transfer, the source position. It counts in Joined HC (Partially Filled / Filled, not a plain Close), Occupied HC moves automatically (+1 target, −1 source) with position history, and a wrong record is voided by an HR Manager with a reason, reversing both.
- Phase 3: an internal candidate enters the pipeline with source "Internal", goes through screening, assessment and interviews like any candidate, and the current manager is notified before the first interview.
- Phase 6: when that internal candidate is selected, the fill is completed through the transfer process below, not through offer and joining.

Transfer process (Phase 6, needs the employee file)

- Types: fills a vacancy · standalone move between units or locations · temporary assignment with an end date.
- Any manager can raise a transfer request for an employee (the releasing manager, the receiving manager) and so can HR; the employee must be in the requester's scope or be the subject of an open vacancy.

- Decision: the other manager gives an opinion and the proposed handover / last-day date but cannot block the move; the HR Manager takes the final decision. The HR Sector Manager also approves only if grade, salary, benefits or working conditions change (his sole authority, 3.5).
- Target position must have Available HC, or the transfer is an HC exception with justification.
- On the effective date: the employee's position changes, Occupied HC moves from source to target, the linked vacancy's Joined HC increases, and everything is written to position and employee history.
- The releasing manager is offered a pre-filled Replacement request for the released position; nothing is created automatically.
- Handover checklist and a notice to the payroll owner; the system itself takes no pay action.
- States: Draft → Other Manager's Opinion → HR Decision → [Pending HR Sector Manager] → Approved → Effective; or Returned / Rejected / Cancelled.

8. Recruitment sources, subscriptions and agencies

Source is mandatory on every Application, because the same person can arrive through a different source in each recruitment cycle.

- Source → Sub-source: Employee Referral → Employee ID; Agency → agency; job board → specific ad; Facebook → campaign; also Walk-in, WhatsApp, Talent Pool, LinkedIn, Internal.
- Where relevant keep Original Source, Application Source and Influencing Source, with history.
- Referral attribution is locked by rule; it cannot be changed after the hiring outcome is known.
- Referral record: referring employee, date, relationship if policy requires, bonus eligibility.
- Subscription record: provider, start / expiry, package, purchased credits / ads / CV searches, used, remaining (derived from usage), cost, account owner, renewal notice, contract / invoice attachment.
- Alerts before expiry and when paid credits remain unused.
- Agency terms: fee type / amount, guarantee period, replacement terms, submission date, candidate ownership expiry.
- Metrics: applications, qualified, interviews, offers, hires, then cost per application / qualified / interview / hire / successful-probation hire, and retention.

9. Person, candidate, application and talent pool

Person Master is the lifelong identity; Candidate Profile and Employee Profile hang from it, and an Application links a candidate to one vacancy.

9.1 Identity and duplicates

- Duplicate check before creating anyone, in order: National ID (if held) → email → mobile, plus name similarity. The system warns and offers Link Existing / Create New / Skip; it never auto-merges.
- Matching also searches former employees and shows Rehire Eligibility to authorized HR.
- Hiring Restriction (Do-Not-Rehire): high HR authority only, coded reason, evidence, added by, review date or permanent. Recruiters cannot create it from impressions.

9.2 Candidate journey

- Interaction Mode: Self-Service / Recruiter-Assisted / Hybrid. Candidate category (administrative / technical) never decides the mode.
- The candidate portal is optional and needs no Google account: a secure link per application for missing data, CV and document upload, interview confirm / reschedule / decline, and offer actions.
- Recruiters can act on behalf of any candidate; the audit records the acting recruiter, the candidate and the time.
- Preferred communication method is stored (phone, WhatsApp, email, recruiter-assisted).

9.3 Application form

- Core data for all: name, mobile, WhatsApp, email, governorate / area, qualification, specialization, graduation year, experience, current job and employer, current and expected salary, notice period, CV, source.
- Vacancy-specific questions come from the Screening Question Library.
- The candidate must accept a Recruitment Privacy Notice before submitting; the accepted notice version and time are stored. For recruiter-entered candidates, the recruiter records verbal acknowledgement.
- Current and Expected Salary are optional for every applicant, and the form does not label them optional. When a salary is entered, a separate sensitive-data consent is taken. Zero is refused, and a blank salary is never an automatic rejection reason.
- National ID is optional at application and becomes mandatory at the hiring-document stage.

9.4 Applications

- A candidate may hold several active applications; the system warns recruiters, it does not prohibit.
- Transfer to another vacancy creates a new application linked to the origin application.
- Withdrawn or rejected applications reopen only with permission and reason; otherwise a new application is created.

9.5 Bulk import and talent pool

- Bulk import (Excel / CSV / Google Sheet, typically 50–100 rows): pre-import validation (new, possible duplicates, missing mobile, invalid), duplicate review screen, Batch ID, source, vacancy, imported by / date, funnel by batch.
- Talent Pool is hybrid: the system suggests category and tags, the recruiter confirms or ignores.

10. Screening, activity log, actions and communications

The recruiter works from one screen and one queue, and every meaningful interaction leaves a short structured record.

10.1 Screening

- Questions are Information or Knockout. A failed knockout flags "Mandatory Requirement Not Met" for human review; nothing is auto-rejected or hidden.
- Screening workspace: candidate data, CV, previous applications / interviews, vacancy requirements and JD, notes, communication history, side by side.
- Actions: Shortlist, Hold, Reject, Request Information.
- AI CV help returns Evidence Found / Not Found / Needs Verification plus a summary; never a match percentage that decides.
- Rejection reasons (coded): Experience, Qualification, Technical Requirement, Salary Expectation, Location / Transportation, Availability, Work Schedule, Position Filled, Candidate Withdrew, Duplicate, Other (note required).
- The internal rejection reason is separate from the candidate-facing message.

10.2 Activity log

- Types: Candidate Call, Hiring Manager Discussion, Internal HR Discussion, WhatsApp, Email, Interview Coordination, CV Review, Follow-up, Agency Discussion, Reference Check, Note, Other (list is configurable).

- Record: actor, date / time, discussed with, summary, outcome, next action + date. One record links to candidate, application, vacancy and request at once and appears in each.
- Activity (happened) ≠ Internal Note (observation) ≠ Action (to do).
- No silent edits: revisions keep original text, editor and time; deletion is void with reason.
- "Improve Summary" (AI) rewrites a rough note; the recruiter reviews before saving.

10.3 Action queue

New Applications, First Contact Due, No-Answer Follow-up, Screening Pending, Waiting Information, Interview Scheduling, Manager Confirmation Pending, Assessments Due, Offers, Joining, Overdue. Every application carries Next Action type, date and owner; missed dates show as overdue.

10.4 Candidate communications

- Message templates per stage: interview invitation, confirmation, reschedule, assessment invitation, rejection, offer notification, missing documents, joining instructions.
- Templates auto-fill name, job, date, time, location, interviewer, contact.
- Phase 1: Copy for WhatsApp, or send by email. WhatsApp API is a later phase.
- **Rejection notice is an explicit step**: when an application is rejected, the system creates a "Send rejection message" action with the channel from the candidate's preference, and records when it was sent.

11. Interview management and evaluation

No interview is confirmed without the manager, the interviewer works from a prepared screen with the JD and questions, and each evaluation is independent.

11.1 Confirmation chain

Proposed → Manager Confirmed → Candidate Confirmation Pending → Confirmed → Checked-in → Started → Completed → Evaluation Submitted.

- The candidate invitation (copy / send) is unavailable until the manager confirms.
- Exceptions: Manager Declined, Candidate Declined, Rescheduled, Candidate No-Show, Manager No-Show, Cancelled, Waived, controlled Ad-hoc Interview (reason + actor recorded).

- Each interview has date, time and **location / meeting link**; managers see their interview schedule with location.
- Reminders (configurable): 24 h and 2 h before to manager and candidate, 15–30 min before to manager. High-no-show roles can require reconfirmation the day before.

11.2 Check-in and evidence

Check-in starts a waiting timer. Recorded events: arrival, interviewer screen opened, first note, evaluation started, last activity, start, end, evaluation submitted. Reports describe evidence ("candidate waited 23 minutes before first recorded interviewer activity"), never conclusions.

11.3 Interview plan and panel

- Rounds per Job / Vacancy (e.g. HR, Direct Manager technical, Sector Manager final), each Required / Conditional / Optional. Waiving a round needs authority and a reason.
- Panel roles: Lead Interviewer, Technical Interviewer, HR, Observer, Final Decision Participant.
- Focus by round: HR — motivation, stability, communication, fit, salary, notice period, transport / location, schedule; Direct Manager — experience, technical knowledge, problem solving, core requirements; Sector Manager — maturity, scope of responsibility, level fit, leadership where relevant.

11.4 Interviewer workspace

Candidate summary, CV, **JD of the vacancy**, interview guide and questions, previous interview information (permission-controlled), evaluation form.

11.5 Competency Library and Question Bank

- Competency Library: company-wide definitions with levels 1–5 and behavioral anchors.
- Job Competency Profile: the competencies each job needs and the required level (e.g. Communication 3 for Sales Representative, 5 for Sales Manager).
- Interview Question Bank: approved questions per competency and per round.
- In an HR interview the system shows the job's **standard HR questions** automatically.
- Question types: Mandatory (must be asked), Suggested, Interviewer-added (recorded with the evaluation).

11.6 Evaluation

- Layers: Requirements → Competencies → Structured Questions → Overall Recommendation.

- Scale 1–5: Well Below / Below / Meets / Above / Significantly Above requirement.
- Critical requirements: Met / Not Met / Needs Verification, separate from ratings; evidence mandatory.
- Recommendation: Strongly Proceed / Proceed / Hold / Do Not Proceed; the hiring decision is separate.
- Interviewers cannot see others' evaluations before submitting their own; afterwards visibility is permission-controlled.
- Revisions after submission create a new version with reason; late submissions are allowed and measured.

11.7 Comparison and decision readiness

- Comparison is live, per candidate, without waiting for the whole pipeline.
- Incomplete evaluations show as Incomplete (e.g. 2/3), never zero. Conflicting recommendations show as Evaluation Conflict, never averaged.
- Decision Readiness: Not Ready / Ready for Decision / Decision Deferred / Selected / Reserve / Rejected / Withdrawn.
- Salary fields in comparison follow field-level permissions.

11.8 Interviewer analytics

Rating distribution vs company average, share of middle ratings, submission delay, candidate waiting, reschedules and no-shows. For calibration only, never an automatic judgment of a manager.

12. Practical / technical assessment

A practical or technical assessment is a formal stage of the candidate journey, configured per job; its detailed rules are still to be defined (section 30).

- Configured in the Job / Vacancy plan like an interview round: Required / Conditional / Optional, with its position in the sequence (e.g. after HR screening, before the manager interview).
- Types (configurable): practical trade test (e.g. machine operation, assembly, finishing), written technical test, skills demonstration, other.
- Scheduling reuses the interview chain: assessor confirmation before the candidate is invited, candidate confirmation, check-in, no-show handling, reminders.
- Assessment record: type, date, location (e.g. factory workshop), assessor(s), criteria from the job's assessment template, result Pass / Fail / Needs Retest, optional score, assessor comments, evidence attachments (test sheet, photos of the work sample).

- Safety: practical tests on the shop floor require an HSE briefing / PPE checklist item before start.
- A failed assessment flags the application for a human decision; it does not auto-reject.
- Results appear in candidate comparison and decision readiness; waiving a required assessment needs authority and a reason.

13. Selection, reference checks, compensation and offer

Selection and the offer are separate steps: the first decides who, the second decides terms within salary authority.

13.1 Selection

- Decisions: Selected / Reserve / Hold / Rejected / Additional Interview Required.
- Selection record: decided by, date, vacancy / position, reason, conditions, snapshot of evaluations available at that moment.
- Reserve candidates are kept so a declined offer does not restart the search.
- Reference Check is an optional formal step by job / policy: referee, consent / evidence, performed by, date, result, follow-up.

13.2 Compensation structure

- Fixed: Basic + configurable fixed allowances (housing, transportation, meal, representation, other). Fixed Monthly Package is calculated by the system, never typed.
- Variable: incentive, commission, bonus, production or sales scheme, linked to a versioned Scheme ID.
- Each component has Show on Offer Yes / No. Incentives and commissions are held in the system but not written in the offer.
- Salary structures (Min / Mid / Max per grade) and incentive schemes are versioned; the offer keeps the versions valid at issue.

13.3 Offer authority

Authority	Limit (configurable)
Recruiter	Around grade minimum
Recruitment Supervisor	Up to midpoint
Recruitment Manager	Up to maximum

Authority	Limit (configurable)
HR Manager	Above maximum, as exception with justification

A lower role may propose above its limit; the offer routes to the lowest sufficient authority. Missing roles use fallback resolution. Limits live in OFFER_AUTHORITY_MATRIX, not code.

13.4 Salary trail

Each offer keeps five figures: Candidate Current Salary, Candidate Expected Salary, Initial Proposed, Approved Offer, Final Accepted. Negotiation analysis uses this trail.

13.5 Offer lifecycle

- Draft → Authority Check / Pending Approval → Approved → Presented / Sent → Candidate Reviewing → Accepted / Declined / Expired / Withdrawn; Negotiation → new version → reapproval if required.
- Versions V1, V2, V3 are never overwritten; each keeps salary, components, terms, approvals, creator and date.
- Every offer has **Valid Until**. Reminder before expiry; after it the status becomes Expired. HR can Extend Validity with reason; the extension is an audited event.
- Delivery: email / portal / PDF for digital candidates; printed offer for recruiter-assisted candidates, with acceptance recorded on behalf plus signed copy or evidence.
- Offer-decline reasons: Salary, Benefits, Counteroffer, Another Offer, Location, Working Hours, Job Scope, Joining Date, Personal, No Response, Other.
- Over-hiring warning before an offer exceeds remaining HC (joined + accepted + outstanding); authorized HR override with reason.

14. Joining, pre-employment and documents

The joining date is agreed after offer acceptance, and a candidate is Cleared to Join only when the date is confirmed and the minimum pre-joining requirements are met.

14.1 Joining

- Offer Accepted → Joining Date Coordination → Date Confirmed → Pre-Employment → Cleared to Join → Joining Expected → Joined / Postponed / Did Not Join.
- Every joining-date change keeps original date, new date, changed by, reason; slippage is a KPI.
- Did Not Join (never started) is distinct from Joined then Early Exit.

- Did-Not-Join reasons: Counteroffer, Another Offer, Personal, No Contact, Salary, Joining Date, Other.
- Joining a different approved position than recruited requires an approved change; recruitment history is preserved.

14.2 Document requirements

- DOCUMENT_REQUIREMENTS by job, employment type, location, worker category: Required / Conditional / Optional; Before Joining / Can Be Deferred; Original / Copy; expiry; verification; who may upload.
- Statuses: Not Submitted → Uploaded → Under Review → Verified Digitally → Original Pending → Original Received → Completed; plus Rejected, Expired, Deferred, Waived, Suspected Issue, Replacement Requested.
- Upload is never equal to physical receipt.

14.3 Physical receipt

HR ticks what was physically received and generates a receipt (e.g. DOC-RCP-2026-00152) listing items, original / copy, date / time, receiver and notes. The PDF is saved to the employee file and can be printed or sent. Later batches get new receipts; old ones are never edited.

14.4 Deferred documents — alert only

- Deferral needs an authorized approver, reason and due date.
- Escalation ladder (configurable): reminders to employee before due, alert to HR on due date, HR escalation when overdue, HR Manager after a further period.
- **The system takes no payroll or wage action.** Escalation ends in an HR alert and action item; any administrative step is decided and handled outside the system.

14.5 Self-service

Eligible candidates and employees use My Documents to see required items, status, expiry and to upload replacements. HR uploads on behalf of non-digital staff, with actor recorded.

15. Employee electronic file

Actual joining links an Employee Profile to the existing Person, so recruitment data is never re-entered and history stays connected.

- Tabs: Personal, Employment, Contract, Compensation (offer package as hired — not payroll), Documents, Qualifications, Medical / Insurance Documents, Recruitment History, Offers, Onboarding, Probation, Performance, Administrative Records, Changes / Transfers, Activity / Audit.
- Employment, position changes, exit and rehire are historical records, never overwrites (EMPLOYMENT_HISTORY).
- Files live in Google Drive in folders named by stable IDs; sheets hold metadata and Drive file IDs. Shareable links are never the security model.
- Document replacements keep prior versions; expiry dates feed a Document Renewal Queue.
- Sensitive tabs (compensation, medical, administrative) have their own field-level permissions.

16. Onboarding and new-hire experience

Onboarding starts before day one, splits work by owner, and ends with the new hire's own feedback after 30 days.

- Onboarding case generated from a template by job, location and employee type once the candidate is Cleared to Join.
- Task owners: HR, IT, Admin, HSE, Hiring Manager. Tasks include employee ID, payroll data preparation (hand-off only), email / account, laptop / PC, workplace, PPE, access, orientation schedule.
- Task statuses: Pending, In Progress, Completed, Not Applicable, Blocked; each with owner, due date, completion time, notes.
- Manager readiness: team informed, workstation ready, first-day meeting planned, responsibilities reviewed, initial objectives, buddy / mentor where used. Shown as an operational readiness indicator, not a manager rating.
- Joining Tomorrow view shows readiness per joiner: documents, workspace, IT, PPE, manager, orientation, welcome gift.
- **Welcome gift**: a formal first-day task — required, gift type, responsible, preparation status, delivered, date.
- First-day check-in records actual joining date and time.
- Orientations tracked separately: HR, HSE, Department, Job, IT / Security — required, date, delivered by, completed, employee acknowledgement.
- Policy acknowledgements: electronic, or recorded on behalf with physical evidence uploaded.
- Assets: laptop, mobile, SIM, tools, PPE, access card, keys, uniform — asset ID, issue date, condition, acknowledgement.

- Check-ins: Day 1, Week 1, Day 30 (templates per job) — duties started, training needs, attendance / behavior concerns, open tasks; concerns create HR actions.
- **30-day New Hire Voice**: positives, improvement areas, recruitment promise vs reality, job clarity, tools readiness, manager / team experience, one thing to change. Separate from performance. Themes: Onboarding, Manager Support, IT, Workplace, Transportation, Job Clarity, Recruitment Experience, Training, Policies, Other; AI suggests, HR confirms. Selected answers are HR-only; management sees aggregated themes. Serious mismatch creates HR follow-up.

17. Social insurance, probation and medical insurance

Each is its own case with a lifecycle and an owner, created automatically by the event that triggers it.

17.1 Social insurance

- Created on Actual Joining. Company operating target: processing within the first month of employment.
- Created → Documents Pending → Ready for Submission → Submitted → Under Processing → Registered → Completed / Issue.
- Tracks required date, due date, responsible HR user, submission, reference / evidence, completion; stays in the HR queue until done.
- Statutory deadlines must be validated against current Egyptian requirements before they are coded; the operating target stays separate from the legal deadline.

17.2 Probation

- Opens automatically on Actual Joining (HR can also open one for an employee already on the list): start, end, decision due date, direct manager, HR site specialist, position. One period only, at most 90 days (PROBATION_DAYS), never extended (CHG-61).
- Goals: the direct manager sets 3–5 measurable goals in the first week; the employee acknowledges them on his private link or in person. Changing goals after acknowledgement needs a reason and a new acknowledgement.
- Checkpoints (PROB_CHECKPOINTS, default 30 / 60 / 75): follow-up reviews on day 30 and day 60 (overall rating, status of each goal, what goes well, what needs improvement); the employee's self-assessment; the final evaluation on day 75.
- Performance log during the period: dated notes, positive or needs-improvement, with impact; shown to the employee on his link, who can reply. A note is never edited, only voided with a reason and kept. (The v2.1 categories such as Behavior / Safety Issue are not separate note types.)

- Final evaluation on the annual appraisal items: productivity 35%, quality 25% and the four core values 10% each (PROB_WEIGHTS), 1–5 with evidence. It supports confirming at a weighted score of 3 or more (PROB_PASS_AVG) with no core value below 2 (PROB_VALUE_MIN). Interview scores are never reused.
- Improvement plan (PIP): 2–3 measurable goals, the support given and a review date 2–4 weeks ahead; it must start by day 60 so it ends inside the period; its outcome (passed / partial / failed) is recorded before the recommendation.
- Decision: the manager recommends confirm or end, with a reason (a detailed one when it goes against the score); HR decides by day 80 (PROB_DECISION_DAY). Confirming = HR team; ending the employment = HR Sector Manager only, with written reasons tied to the evaluation. The decision is told in a meeting (date recorded), then a printed confirmation / non-confirmation letter (wording interim, pending legal review).
- Stay interview near day 60 (CHG-62): HR with the employee, without the manager — what he likes, what could make him leave, manager support (1–5), intent to stay (1–5), risk level; a high risk alerts the HR managers and the HR site specialist. HR only.
- Manager satisfaction survey after confirmation: 3 questions (1–5) to the direct manager, feeding the quality-of-hire KPI.
- What the employee sees (CHG-66): his goals, the log notes, his self-assessment, the day-30 / day-60 follow-ups once the manager saves them, and the final evaluation (items, strengths, improvements, decision) only after the HR decision. Internal notes, the stay interview and the manager survey are never shown to him.
- Reminders and escalation (daily job): goals not set by day 5; 7 days before each review; 30 / 15 / 7 days before the decision (PROB_REMIND_DAYS); a late review goes to the manager's manager and the HR site specialist after 3 days, to the HR managers and HR Sector Manager after 7 (PROB_ESCALATE_DAYS).
- Manager change: HR sets the new direct manager with a reason; earlier reviews stay with the original manager. Exit during probation closes the case (automatically when the employee leaves, or by HR with a reason) without a fictional final evaluation.
- After the decision: an employee-history entry; on confirmation the medical insurance case opens and the manager survey is sent; on ending, HR records the end of service from Employees (no payroll action).

17.3 Medical insurance

- Opened automatically when HR confirms the employee — only after successful probation (company policy; CHG-63). Owner: the HR site specialist.
- To add → Added (insurer from MEDICAL_PROVIDERS, card number, date added, number of dependents) or Not added (reason, e.g. covered elsewhere). HR managers can reopen a closed case with a reason.

- Due within MEDICAL_ADD_DAYS (14) of confirmation; a late case shows in the HR to-do and sends one alert to the HR managers and the owner.
- Opened, due and added dates are stored separately; HR team only; every change audited.

18. Dashboards, SLA, KPIs and quality of hire

Every home screen starts with the user's actions for today, and every KPI drills down to the records behind it.

Role	Action-first home
Recruiter	New applications, first contacts, follow-ups, interviews and assessments today, confirmations, offers, joining, overdue
Recruitment Manager	Vacancy age and priority, recruiter workload, pipeline, bottlenecks, offers, no-shows, source utilization
Hiring Manager	My requests, approvals, interviews today with location, candidates waiting, evaluations pending, comparison, joiners, onboarding and probation tasks
HR Management	End-to-end control: exceptions, documents, insurance, onboarding, probation, analytics
CEO	HC and vacancies, critical positions, decisions waiting, cycle trends, exceptions

- Live funnel per vacancy: Required → Applications → Screened → Assessed → Interviewed → Selected → Offers → Accepted → Joined → Remaining.
- Stage KPIs: request approval, time to start, first candidate, screening, time to interview, manager confirmation, candidate waiting, evaluation submission, selection, offer approval, offer acceptance, accepted → joined, no-shows, reschedules, joining slippage, early turnover (30 / 90 / 180 / 365 days), probation outcome.
- SLA matrix per activity, configurable by priority and job level; durations from stage history, showing which role held the delay.
- Notification levels: Immediate Alert, Reminder, Daily Digest, Escalation. Given the Phase-1 email budget, only OTP, Immediate Alerts and one daily digest go by email; the rest stay in-app.

- Quality of Hire links source, recruiter, screening, assessment, interview, offer, joining, probation and retention. The KPI screen measures it as the average final probation evaluation, beside probation pass rate, 90-day leavers and manager satisfaction; no combined formula until enough data exists.

18.1 Recruitment KPIs (built v0.26–v0.27)

The KPI screen (under Recruitment) computes every KPI from the portal's own records; nothing is typed by hand (CHG-64, CHG-65).

- Views: Process, Recruitment team, HR sites, Managers & approvers, and My evaluation for every user. Filters: period, sector, location, job class (labour / technical / administrative / leaders, from the grade via KPI_JOB_CLASS; default ≤4 labour, 5–6 technical, 7–8 administrative, 9+ leaders).
- Process KPIs (22 in 5 groups). Speed: request approval days, vacancies filled on time, time to hire, time to start, aging vacancies. Quality: probation pass rate, leavers within 90 days, quality of hire, join rate after acceptance, manager satisfaction. Efficiency & cost: offer acceptance, interviews per offer, cost per hire (subscriptions ÷ hires), referral share. Candidate experience: first contact within 3 days, closed candidates who got a reply, New Hire Voice average, interview no-shows. Compliance: documents complete before joining, social insurance on time, medical insurance on time, hires above approved HC.
- Each KPI shows value, target, number of cases, green / amber (within 10%) / red and a 1–5 score on the appraisal scale; fewer than KPI_MIN_CASES (3) cases = "not enough data", left out of the score. Every KPI drills down to its cases. Days-to-fill targets per job class: KPI_TTF_TARGETS (21 / 30 / 45 / 60 days).
- Scorecards, weights summing to 100: recruiter (vacancies he leads and tasks given to him) — on time 25, probation pass 25, tasks on time 15, first contact 10, screening quality 10, offer acceptance 10, closing messages 5; recruitment lead (whole team) — on time 25, probation pass 25, aging 15, assignment speed 10, offer approvals within a day 10, early leavers 10, manager satisfaction 5; HR site specialist — onboarding tasks on time 25, documents complete 20, social insurance on time 20, medical insurance on time 15, New Hire Voice follow-up 10, probation goals in week 1 10. A recruiter sees only his own card.
- Managers, approvers and interview panels: approval days, escalated approvals, interview evaluation within 24 hours, probation reviews on time, onboarding tasks — for information only, never in a score.
- My evaluation (CHG-66): every user sees the cards that apply to him and his service as manager, approver and evaluator, with only his own cases behind them.

- Targets & weights tab: KPI targets, days-to-fill per job class, job class per grade, card weights (live sum must be 100; blank = not in the card, 0 = information only; reset to default), minimum cases and the monthly summary. Edited by the system owner, HR Sector Manager and HR Manager only, with a reason, audited; the rest of HR / recruitment and the consultant view only.
- Excel export of any view; a monthly e-mail on the 1st (KPI_MONTHLY_EMAIL) to the recruitment manager, HR manager and HR Sector Manager. Forecasting and advanced analytics stay in Phase 8.

18.2 Insights (built v0.29.0)

- Source return: for each recruitment source, the funnel from applying to confirmation after probation, quality of hire (final probation score), time to hire and cost — ad spend, subscriptions spread over the period, agency fees and referral bonuses — giving cost per hire.
- Bottlenecks: each process step (request approval, assignment, first contact, each pipeline stage, interview confirmation, evaluation, offer approval, candidate answer, joining) with average / median / 90th-percentile days, what is waiting now, what is overdue, the slowest people where a person owns the step, and the oldest cases.
- Interviewer calibration: how each evaluator scores against the rest of the same panel, how often his recommendation matches what happened to the candidate, and, for those hired, his interview score against the final probation score.
- Settings INSIGHT_STEP_DAYS (target days per step) and INSIGHT_REFERRAL_BONUS (an estimate; the portal pays nothing). Same filters as the KPI screen (period, sector, location, job class). Access: HR / recruitment management and top management (and the HR team); the consultant reads only.

18.3 Hiring forecast (built v0.30.0)

- Method: from the last 12 months, leavers per month × 3 + the open vacancies still to fill = the hires needed next quarter, by job class and by sector. Approved positions that are empty with no vacancy are shown apart, as a management decision rather than a forecast.
- Expected time to fill per job class: the median of vacancy opened → joined over the year, else the job class target.
- Confidence: LOW under 6 months of history or under 10 leavers, MEDIUM under 12 months, GOOD after. The screen also shows the load per recruiter (hires needed ÷ active recruiters).

19. Permissions and field-level security

Authorization = role + organizational scope + process authority + field sensitivity, checked on the server for every call.

Capability	Requester / Hiring Manager	Recruitment team	HR Manager	HR Sector Manager	CEO
Create recruitment request	Within scope	As configured	Yes	Yes	As configured
Approve request	By org chain	No	Yes	Yes	When rule applies
Approve HC exception	No	No	Yes	Yes	Yes
HR priority classification / override	No	No	Yes	Yes	No
Manage candidates	View as needed	Within assignment / team	Yes	Yes	If needed
See others' evaluations before own submission	No	No	Policy	Policy	Policy
Propose offer	No	Yes	Yes	Yes	No
Approve salary	No	Within band	Above max by exception	Yes	Where rule requires
Change grade / salary / benefits / working conditions	No	No	No	Yes (sole)	No
Controlled override	No	Limited by type	By type	By type	By configured type
Audit explorer	Own / scope	Own / team	Full HR	Full HR	Executive

- Technical interviewers do not see current salary or offer details by default.
- Hiring managers do not see HR-only notes.
- Medical and highly sensitive documents need a separate permission.
- New Hire Voice individual answers can be HR-only.
- The role is always resolved from the authenticated user on the server; a role sent by the browser is ignored.

20. State machines and automatic triggers

Valid transitions live in WORKFLOW_RULES / STATE_TRANSITIONS configuration, not scattered through screens.

Process	Flow
Structural Change	Draft → Submitted → Endorsement (management chain) → HR Review → Pending CEO → Approved / Rejected / Returned → Org Version Created → Position Active
Recruitment Request	Draft → Submitted → Manager Approval steps → HR Review → [Returned / Rejected / HC Exception / Pending CEO] → Approved for Recruitment → Vacancies Created → Closed
Vacancy	Approved → Preparation → Open ↔ On Hold → Partially Filled → Filled → Closed; Cancelled / Frozen
Application	New → First Contact → Screening → Shortlisted → Assessment → Interview Process → Ready for Decision → Selected / Reserve / Hold / Rejected / Withdrawn → Offer Process → Pre-Employment → Cleared → Joined
Assessment	Proposed → Assessor Confirmed → Candidate Confirmation Pending → Confirmed → Checked-in → Completed → Result Recorded; No-Show / Cancelled / Waived
Interview	Proposed → Manager Confirmed → Candidate Confirmation Pending → Confirmed → Checked-in → Started → Completed → Evaluation Submitted
Offer	Draft → Authority Check → Pending Approval → Approved → Presented → Reviewing → Accepted / Declined / Expired / Withdrawn; Negotiation → New Version → Reapproval
Joining	Accepted → Date Coordination → Date Confirmed → Pre-Employment → Cleared → Expected → Joined / Postponed / Did Not Join
Onboarding	Created → Preparation → First Day → Orientations → Week-1 → 30-Day → Completed
Social Insurance	Created → Documents Pending → Ready → Submitted → Processing → Registered → Completed / Issue

Process	Flow
Probation	Active → Checkpoints → Final Review Due → Final Evaluation → Decision / Closed due to exit
Medical Insurance	Eligible → Enrollment Pending → Documents → Submitted → Activated → Notified

Trigger	Automatic action
Request approved for recruitment	One vacancy per request line; requester notified
Any approval step or HR edit	Requester notified; timeline event
Application rejected	"Send rejection message" action in preferred channel
Candidate checked in	Interviewer / assessor + recruiter notified; waiting timer starts
Evaluation SLA exceeded	Reminder, then escalation per rule
Offer near Valid Until	Reminder to owner; Expired on the date
Offer accepted	Joining-date coordination action
Joining date confirmed	Pre-employment and onboarding preparation tasks
Actual joined	Employee profile, onboarding, social insurance and probation cases
Probation passed	Medical insurance case
Deferred document overdue	HR alert and action item (no wage action)
Subscription near expiry	Alert with remaining credits
Vacancy ages / required date nears	Priority recalculated
Recruiter inactive	Work to Unassigned Queue
Document expiry nears	Renewal action
Payroll sheet import (later phase)	Occupied HC refreshed; mismatch report to HR

21. Logical data model

About 105 logical tables across all phases; users see screens, never sheets. Phase 1–2 needs roughly 35 of them. Items marked **(v2.1)** are new in this version.

Domain	Tables
Access (v2.1)	USERS, USER_ROLES, LOGIN_CODES, SESSIONS
Org / Jobs	ORG_UNITS, ORG_VERSIONS, JOBS, JOB_VERSIONS, JOB_DESCRIPTIONS, POSITIONS, POSITION_HISTORY, POSITION_CHANGE_REQUESTS, GRADES, SALARY_STRUCTURES, COMPETENCIES, COMPETENCY_LEVELS (v2.1), JOB_COMPETENCIES, JOB_SKILLS, LOCATIONS, EMPLOYMENT_TYPES
Payroll link (v2.1, later phase)	PAYROLL_IMPORT_LOG, PAYROLL_POSITION_MAP
Identity / Employment	PERSONS, CANDIDATE_PROFILES, EMPLOYEE_PROFILES, EMPLOYMENT_HISTORY, CONSENT_RECORDS (v2.1)
Requests / Authority	RECRUITMENT_REQUESTS, REQUEST_LINES (v2.1), REQUEST_VERSIONS, REQUEST_REPLACEMENTS, APPROVAL_INSTANCES, AUTHORITY_RULES, OFFER_AUTHORITY_MATRIX, DELEGATIONS, SYSTEM_OVERRIDES
Priority / Vacancy	PRIORITY_RULES, PRIORITY_HISTORY, VACANCIES, VACANCY_RECRUITERS
Advertising / Sources	AD_TEMPLATES (v2.1), ADVERTISEMENTS, ADVERTISEMENT_VERSIONS, RECRUITMENT_SOURCES, SOURCE_SUBSCRIPTIONS, SOURCE_USAGE, APPLICATION_SOURCE_HISTORY, AGENCIES / AGENCY_TERMS
Applications / Screening	APPLICATIONS, APPLICATION_STAGE_HISTORY, SCREENING_QUESTIONS, VACANCY_SCREENING_QUESTIONS, SCREENING_RESPONSES, SCREENING_REVIEWS, IMPORT_BATCHES
Work / Communication	ACTIVITIES, ACTIONS, COMMUNICATION_TEMPLATES, NOTIFICATION_RULES, NOTIFICATION_LOG

Domain	Tables
Assessment (v2.1)	ASSESSMENT_TEMPLATES, ASSESSMENTS, ASSESSMENT_RESULTS
Interviews	INTERVIEW_PLANS, INTERVIEW_QUESTIONS (v2.1), INTERVIEWS, INTERVIEW_PANEL, INTERVIEW_EVENTS, EVALUATIONS, EVALUATION_DETAILS, EVALUATION_VERSIONS, REFERENCE_CHECKS
Selection / Offer	SELECTION_DECISIONS, COMPENSATION_COMPONENTS, INCENTIVE_SCHEMES, OFFERS (+ Valid Until, 5-figure salary trail), OFFER_COMPONENTS, OFFER_EVENTS (v2.1: extensions, presentations)
Joining / Documents	JOINING_HISTORY, DOCUMENT_TYPES, DOCUMENT_REQUIREMENTS, PERSON_DOCUMENTS, DOCUMENT_RECEIPTS, DOCUMENT_RECEIPT_ITEMS
Onboarding / Post-join	ONBOARDING_TEMPLATES, ONBOARDING_CASES, ONBOARDING_TASKS, ASSET_ASSIGNMENTS, SOCIAL_INSURANCE_CASES, NEW_HIRE_FEEDBACK, NEW_HIRE_FEEDBACK_RESPONSES, FEEDBACK_THEMES
Probation / Benefits	PROBATION_CASES, PROBATION_CHECKPOINTS, PROBATION_EVENTS, PROBATION_EVALUATIONS, MEDICAL_INSURANCE_CASES
Control	WORKFLOW_RULES / STATE_TRANSITIONS, SLA_RULES / SLA_EVENTS, PERMISSION_RULES / FIELD_ACCESS_RULES, REASON_MASTER, CONFIG, ID_SEQUENCES, AUDIT_LOG

- REASON_MASTER holds every coded list: rejection, withdrawal, offer decline, did not join, cancellation, deferral, override.
- Derived values (Remaining HC, remaining credits, Available HC) are calculated from transactions, not typed.
- Row numbers are never identities; IDs come from ID_SEQUENCES under a lock.
- Column-level schema is produced per phase, starting with Phase 1 tables.

22. Audit, versioning and evidence

Nothing material is silently overwritten or deleted; business records are voided or versioned with a reason.

- AUDIT_LOG: timestamp, user, acting-on-behalf-of (candidate / employee where relevant), entity type / ID, action, field or state transition, old / new value, reason, session reference.
- Versioned: organization, JDs, requests, salary structures, incentive schemes, offers, evaluations, ad content, consent notice.
- Approval snapshots preserve exactly what each approver saw.
- Historical actions stay attributed to the person who acted, even after ownership or management changes.
- System timestamps are operational evidence; they never prove intent, negligence or physical presence on their own.
- Only the application writes to AUDIT_LOG; no user, including the owner, edits it through the UI.

23. Google Apps Script technical architecture

One web app, layered so that screens never touch sheets and the data store can later move off Sheets without rewriting business logic.

Layer	Responsibility
UI	HtmlService pages and components, Arabic/English, mobile-friendly; no trusted authority
Router / API	One entry point; validates session token and input; calls services
AuthService	Phase 1: email OTP + session tokens. Workspace phase: replaced by Google identity. Only this module changes
Business services	Request, Structural Change, Vacancy, Advertising, Candidate, Assessment, Interview, Offer, Joining, Document, Onboarding, Insurance, Probation, Dashboard
Shared engines	Workflow, Approval, Authority Resolver, Priority, SLA / Escalation, Notification, Audit / Versioning, Document, Permission, Override

Layer	Responsibility
Repositories	The only code that reads/writes sheets: batch reads/writes, caching, indexes, locks, stable IDs
Integrations	Drive, Gmail, Calendar (optional), payroll-sheet import (read-only, later phase), WhatsApp later
Configuration	Statuses, transitions, authority, SLA, templates, reason masters, feature flags (e.g. HC blocking on/off)

23.1 Login (Phase 1)

1. User enters email → server checks USERS (active) → generates a 6-digit code valid ~10 minutes, stored hashed in LOGIN_CODES → sends it by email.
2. User enters the code → server issues a random session token (stored hashed in SESSIONS, ~14-day expiry) → the browser keeps it and sends it on every call.
3. Failed-attempt limit and lockout per email; logout and HR-side session revoke.
4. Every server call resolves user, role and scope from the token; nothing from the browser is trusted.

23.2 Data store and limits

- Split data across several spreadsheets by domain (e.g. Core & Org, Recruitment, Employee & Post-join, Audit & Logs) to stay well below per-spreadsheet size limits and to keep the audit log from slowing operational reads.
- All spreadsheets owned by the system account and shared with no one.
- Execution-time and quota limits (script runtime, triggers, email) must be checked against Google's current published quotas; long jobs (imports, recalculations) run in batches from time-driven triggers.
- LockService around ID generation, approvals, ownership changes and HC-sensitive actions.
- Migration trigger to a database: when response times or sheet sizes pass thresholds set in Phase 1 testing, the repositories move; services and UI stay.

23.3 Other rules

- Drive folders named by stable IDs, never by person names alone.
- Scheduled triggers: priority recalculation, SLA / escalation, reminders, offer expiry, subscription expiry, document renewal, daily digest (payroll import when built). No per-row triggers.

- Deployment: every release is a new versioned deployment of the web app; changes to code alone do not reach the published URL.

24. Screen map

Screens are action-first, responsive for mobile use, with status chips, drill-down and global search by person, candidate, application, vacancy, request or employee ID.

Area	Core screens
Login	Email → code → session
Home	My actions today, alerts, interviews and assessments today, joining soon, overdue
Requests	Create / view, my requests + timeline, approvals, returns, changes, priority
Structure	New position / structural change requests, endorsements, CEO approval
Vacancies	Board / list, funnel, team, ads, sources, age / priority
Candidates	Search, Candidate 360, applications, activity, documents
Screening	Workspace, bulk import, talent pool
Assessments	Schedule, confirmations, check-in, result entry
Interviews	Calendar / list with location, confirmations, check-in, interviewer workspace (JD + questions), evaluation, comparison
Offers	Compensation proposal, approvals, versions, validity, negotiation
Joining	Date coordination, pre-employment, clearance, did-not-join
New hires	Electronic file, onboarding, documents and receipts, social insurance, New Hire Voice
Probation	Cases, checkpoints, performance log, final review
Medical insurance	Eligibility and enrollment queue
Sources	Source master, subscriptions, usage, ROI

Area	Core screens
Management	Funnel, SLA, bottlenecks, workload, quality of hire
Admin	Users and roles, org / jobs / positions, JD and ad templates, question bank, rules, reasons, HC maintenance (payroll import later), audit explorer
Public	Application form (per ad link), candidate secure link, employee My Documents

25. Exception catalogue

Each case below must be handled by a defined rule and tested before its phase goes live.

- Request: material change after approval; HC raised or cut with live candidates and offers; vacancy cancellation; request covering several locations where one location fills first.
- Approval: missing section or department level; vacant Sector Manager; HR Manager requesting a Sector Manager; requester equals calculated approver; CEO rule in force.
- Candidates: several active applications; transfer between vacancies; withdrawal and return; rejection and reconsideration; former employee / rehire; hiring restriction.
- Recruiters: several on one vacancy; duplicate contact; recruiter absent or leaving; bulk reassignment.
- Sources: referral attribution dispute; agency ownership expiry; subscription expiring with unused credits.
- Assessment / interview: ad-hoc or waived round; assessor or manager no-show; candidate waiting; late or revised evaluation; strong disagreement; interviewer changed; failed assessment.
- Offer: renegotiation after acceptance; offer expiry and extension; over-hiring risk; accepted but did not join.
- Joining: joining date changed several times; joining a different approved position; early exit after joining.
- Documents: wrong, suspect or expired documents; replacement versions; deferred originals overdue (HR alert only).
- Post-join: probation manager change; overdue final review; exit during probation; confidential New Hire Voice answers.
- Platform: login email not received; session expired mid-form; payroll row that matches no position; two users acting on the same record at once; email quota reached (fallback to in-app only).

26. Confirmed decisions and configurable items

Confirmed decisions are fixed requirements; configurable items are set in the Admin screens and never invented in code.

26.1 Confirmed decisions

- Only existing positions within the requester's scope can be requested; new positions go through structural change with CEO final approval.
- Current and available HC are guidance; any number may be requested; HC exceptions (HC above the structure) go to a separate approval by the HR Sector Manager only (CHG-40/2).
- Only the HR Sector Manager (Mohamed Omara) changes grade, salary, benefits or working conditions.
- Approval chain: Section Head → Department Manager → Sector Manager → HR Manager; CEO by HR routing or dated CEO rules.
- Return for revision with exact timestamps and versions.
- HR Manager alone sets Normal / Important / Critical; dynamic priority may reorder work.
- One vacancy per location; several recruiters per vacancy; one owner per application; missing team roles are skipped.
- Source is mandatory per application; subscriptions are managed.
- Hybrid candidate journey; salaries optional at application and only with a separate sensitive-data consent (v0.14.1 personal-data rules), no "prefers not to say" states; National ID optional at application; bulk import of 50–100 rows; hybrid talent pool.
- Practical / technical assessment stage exists.
- Continuous pipeline: candidates move independently; live comparison; reserve candidates.
- Offer authority by salary band: recruiter ~min, supervisor to mid, recruitment manager to max, HR Manager above max. Variable pay held in system, not in the offer.
- Joining date agreed after acceptance; filled HC counts actual joiners.
- Deferred documents → HR alerts only; no wage link.
- Social insurance within the first month; medical insurance after successful probation.
- Welcome gift on day one; 30-day New Hire Voice.
- Phase 1: personal Gmail with OTP login; ~45 users; actual HC as temporary structural HC; payroll sheet read for occupied HC.

- Probation: one period only, at most 90 days, no extension; reviews on day 30 and 60, final evaluation on day 75, PIP must start by day 60, decision by day 80; ending employment = HR Sector Manager only.
- Stay interview near day 60 by HR only (not the manager); manager satisfaction survey after confirmation.
- Medical insurance case opened on confirmation.
- Recruitment KPIs: process KPIs (speed, quality, efficiency & cost, candidate experience, compliance); scorecards per recruiter, recruitment lead and HR site specialist (weights sum to 100, score 1–5); managers' and approvers' service KPIs for information only; monthly e-mail.
- KPI targets, days-to-fill per job class, job class per grade and weights are edited on screen by the system owner, HR Sector Manager or HR Manager, with a reason and audit.
- Every user sees his own evaluation (My evaluation); the probation employee sees the day-30 / day-60 follow-ups once saved and the final evaluation only after the HR decision.
- Every form is printable from inside the program.

26.2 Configurable items

- CEO approval rules by scope and dates; delegation fallbacks.
- Offer authority thresholds by grade / range.
- Priority weights and aging bands.
- SLA targets and escalation ladders.
- Interview and assessment rounds per job / job family; question bank; assessment templates and pass criteria.
- Document requirements by job / employment type / location / category; deferral ladder.
- Probation: PROBATION_ENABLED, PROBATION_DAYS (max 90), PROB_CHECKPOINTS (30, 60, 75), PROB_DECISION_DAY (80), PROB_REMIND_DAYS (30, 15, 7), PROB_ESCALATE_DAYS (3, 7), PROB_WEIGHTS (final evaluation items, sum 100), PROB_PASS_AVG (3), PROB_VALUE_MIN (2).
- Notification channels, digest time, email budget.
- Field visibility by role.
- HC enforcement switch (warn / block).
- Legal deadlines, after validation against current Egyptian requirements.
- Medical insurance: MEDICAL_ADD_DAYS (14), MEDICAL_PROVIDERS (insurer list).

- Recruitment KPIs (edited on the KPI screen): KPI_TARGETS, KPI_TTF_TARGETS (days to fill per job class: 21 / 30 / 45 / 60), KPI_JOB_CLASS (job class per grade), KPI_WEIGHTS_RECRUITER, KPI_WEIGHTS_LEAD, KPI_WEIGHTS_SITE (each sums to 100), KPI_MIN_CASES (3), KPI_MONTHLY_EMAIL.
- Insights: INSIGHT_STEP_DAYS (target days per step: REQ_APPROVAL 3, ASSIGN 2, FIRST_CONTACT 3, stages NEW 3 / CONTACTED 5 / SCREENING 5 / SHORTLISTED 7 / INTERVIEW 10, IV_CONFIRM 2, EVAL 1, OFFER_APPROVAL 2, OFFER_RESPONSE 5, JOINING 21), INSIGHT_REFERRAL_BONUS (referral bonus estimate per referral hire; default 0).
- GOLIVE_CHECKS — the manual go-live items ticked on the readiness screen (date, who, note); kept by the screen.

27. Implementation sequence

Build starts with Phases 1–2, which replace the current online requisition form (HR-REC-F02) with a controlled request-to-vacancy flow; each phase uses the shared engines from day one.

Phase	Deliverable	Gate to next phase	Status
1 Foundation	OTP login, users / roles, org structure load, jobs, positions, baseline HC (1 per position), audit, configuration, IDs	Real structure loaded (test structure used during build); login and approval chain tested with 3–4 test users	Delivered — v0.1 to v0.2.2 (real structure and coding v0.2.2); authenticator sign-in added in v0.15.0
2 Request → Vacancy	Request with lines, approval engine, HC exception, HR edit + notifications, timeline, CEO rules, structural change, priority, vacancy per location, recruiter assignment, record a vacancy filled by internal transfer (interim)	Parallel run with the current form for one month	Delivered — v0.2.0 to v0.2.3 (structure editing v0.2.1, board approval v0.2.3); reminders, escalation and HC-exception step v0.8.1. REQ-011 and VAC-005 completed v0.28.0

Phase	Deliverable	Gate to next phase	Status
3 Candidate pipeline	Person / candidate / application, application form + consent, sources / subscriptions / ads, screening, activity / actions, bulk import, talent pool, rejection messages, internal candidates	—	Delivered — 3A v0.3.0, 3B-1 v0.8.0, 3B-2 v0.9.0, 3B-3 v0.10.0. CAN-005 settled v0.28.0 (salary optional, unlabelled, never zero)
4 Assessment & interviews	Assessment stage, interview scheduling / confirmation, check-in / evidence, question bank, evaluations, comparison	Question bank loaded for priority jobs	Delivered — 4A v0.11.0 (review fixes v0.11.1), 4B v0.12.0. Question bank content pending from HR
5 Offer → Joining	Selection, compensation authority, offer versions / validity, joining, pre-employment documents and receipts	Salary structures loaded by HR Sector Manager	Delivered — 5A v0.13.0 to v0.13.2, 5B v0.14.0; personal-data protection v0.14.1
5+ Recruitment policy	Full recruitment policy with forms (printable versions of the portal forms + forms for manual cases), written on the built request-to-joining cycle (owner decision 2026-10-05)	Right after 5B	Not part of the portal (separate policy document)
6 New hire	Employee file, onboarding, welcome gift, social insurance, New Hire Voice, internal transfer process	—	Delivered — 6A v0.17.0, 6B v0.18.0, 6C v0.19.0 (internal transfer)

Phase	Deliverable	Gate to next phase	Status
6+ Manager guide	Manager guide: requesting, approving, confirming interviews, evaluating, selecting, onboarding and first-day role — simple, with screenshots (owner decision 2026-10-05)	Right after Phase 6	Delivered (as a separate guide page)
7 Probation & benefits	Probation, medical insurance, early retention	—	Delivered — v0.25.0 (probation, medical insurance), v0.26.0 (stay interview, manager survey, KPIs), v0.27.0 (employee view of his evaluation)
8 Intelligence	Advanced dashboards, source ROI, bottlenecks, quality of hire, calibration	Enough data (e.g. 6 months)	Started — KPI screen v0.26.0–v0.27.0; source return (cost per hire), bottlenecks and interviewer calibration v0.29.0; hiring forecast v0.30.0 (confidence grows with data); v0.31.0 — AI CV reading (suggestions only, monthly cost cap)

Status at portal v0.31.0 (7 Oct 2026). The two phases added by CHG-39 are delivered too: Operational reports (v0.22.0) and the Interactive process map (v0.23.0; probation and medical steps live from v0.25.0).

The current form's data (requests, jobs tab) is migrated into Phase 2 tables, not discarded.

Phase 1 tables, columns and the structure import template: Phase 1 Schema

Go-live readiness (v0.30.0)

A readiness screen for the owner and the HR Sector Manager (the HR manager reads) shows what is still missing before go-live. Automatic checks cover the daily job, e-mail, demo data, key roles, the authenticator, unit heads and their accounts, HR site specialists, structure, employees, approved JDs, salary structures per grade, offer authority,

competencies and question bank, documents, sources, onboarding templates, medical insurance providers and legal entities, each linked to the screen that fixes it. Manual items are ticked with a date and a note and audited: lawyer review, the old passwords sheet, role-based user testing, training, moving the current form's open requests, and the one-month parallel run.

28. Acceptance criteria

A phase is accepted only when every criterion below holds for the features it delivers.

- Every material event has an owner, a state and an audit record.
- No approved record is silently overwritten.
- No workflow depends on a named role always being filled.
- Candidate identity survives applications, employment, exit and rehire.
- Every application has a traceable source.
- Users see their next actions without searching.
- HC, offers and joining cannot produce inconsistent vacancy counts.
- Sensitive fields are protected on the server; no user can open the spreadsheets directly.
- Legitimate exceptions go through controlled authority, not workarounds outside the system.
- Every management KPI drills down to its records.
- The system never performs any wage or payroll action.
- A requirement counts as delivered only when its rule, data, permission, workflow transition, screen and audit behavior all exist.

29. Requirements traceability matrix

98 requirements, each with a stable ID, its source and the section that specifies it; the Status column moves Specified → Built → Tested as delivery proceeds. Status at portal v0.31.0 (7 Oct 2026): 94 Built, 3 Partial (works, but part is missing or built differently), 1 Later (deferred by the owner), 0 Not built — per the portal's requirements-status file, checked against the code and tests.

Source codes: **OB** = owner's first brief · **OD** = owner decision in the design conversation · **OD-30S** = owner decision, 30 Sep 2026 · **CF** = current form HR-REC-F02 · **DC** = design element agreed in the conversation.

ID	Requirement	Source	Section	Phase	Status
ACC-001	OTP login for personal Gmail users; spreadsheets owner-only	OD-30S	2, 23.1	1	Built
ACC-002	AuthService swappable for Workspace identity	OD-30S	23	1	Built
ACC-003	Role and scope resolved on the server only	DC	19	1	Built
ACC-004	One login shared with the Performance Appraisal portal (unified sign-in for both systems)	OD	23	later	Later
UX-001	Same design system, tone and spirit as the Performance Appraisal portal: greeting and progress message, action-first «المطلوب منك», idle auto-lock with warning, 7-day remember-me, friendly in-portal guide	OD	24	1–2	Built
ORG-001	Job, Position, Employee, Vacancy as separate entities	DC	3.1	1	Built
ORG-002	Versioned organization; closed positions kept	OD	3.2	1	Partial
ORG-003	Structured, versioned JD with view / print / PDF / email	OD	3.3	1	Built
ORG-004	Only HR Sector Manager changes grade, salary, benefits, working conditions	OD	3.5	1	Built
ORG-005	Delegation / acting authority with dates and history	OD	6.3	1	Built
ORG-006	Structural change: chain endorsement, HR review, CEO final approval, Position ID on approval	OD	3.4	2	Built
ORG-007	Structure maintained from the portal without files: add / rename / move / close a unit, set or change its head (reporting lines follow), add / move a position; reason required, unit and position history, blocked while open vacancies or requests exist; editing by System Owner and HR Sector Manager	OD	3	2	Built

ID	Requirement	Source	Section	Phase	Status
ORG-008	Coding: units = sector code + department no. + section no. (FAD-04-02); jobs = job family + number (ACC-007), one code per title company-wide; old form codes kept as reference; new codes generated automatically	OD	3	2	Built
ORG-009	Multi-company: Kandil Egypt's 4 legal entities (employer of record, social insurance) and the sister companies Enarat and Le Chateau (same owners, managed separately, shared HR) as separate companies; CEO-level approval resolves to each company's own top position	OD	3, 6	later	Partial
HC-001	Structural HC = 1 per position until a manpower plan; HC Basis flag	OD-30S	5	1	Built
HC-002	Occupied HC entered by HR; payroll-sheet import (non-salary columns only) in a later phase	OD-30S	2	1 / later	Partial
HC-003	Current / available HC shown as guidance; any number requestable	OD	5	2	Built
HC-004	HC exception approved by the HR Sector Manager only (CHG-40/2)	OD	5	2	Built
HC-005	Available = Structural − Occupied − Open; no double counting	DC	5	2	Built
HC-006	HC checks warn-only until switched to block	OD-30S	5	2	Built
HC-007	Filled HC counts actual joiners only	DC	5	5	Built
REQ-001	Manager requests only positions in his scope, validated server-side	OD	4	2	Built
REQ-002	Current form fields kept: education, experience context, skills + proficiency + Essential / Additional, work model, proposed hire date, replacements	CF	4.1	2	Built

ID	Requirement	Source	Section	Phase	Status
REQ-003	One request, several locations via request lines	CF, OD-30S	4.1	2	Built
REQ-004	Chain from structure; missing level skipped; vacant Sector Manager fallback; self-approval blocked	OD	6.1	2	Built
REQ-005	CEO by HR routing, dated CEO rules, Sector Manager requests → CEO	OD	6.2	2	Built
REQ-006	HR Manager: approve / reject / return / edit defined fields / send to CEO	OD	4.2	2	Built
REQ-007	Requester notified of every approval step, rejection and HR edit	OB	4.3	2	Built
REQ-008	Return for revision with exact timestamps and versions	OD	4.4	2	Built
REQ-009	Approval snapshot of what each approver saw	DC	6.4	2	Built
REQ-010	Request timeline and My Requests screen	DC	4.3	2	Built
REQ-011	Change request and reapproval for material post-approval changes	DC	4.4	2	Built
PRI-001	Requested priority / HR classification by HR Manager only / dynamic score / temporary override	OD	6.5	2	Built
VAC-001	One vacancy per location line	OD-30S	7.1	2	Built
VAC-002	Partial fill; request closes fully or partially by number	OB	7.1	2	Built
VAC-003	Several recruiters per vacancy; lead; one owner per application	OD	7.2	2	Built
VAC-004	Missing recruitment roles skipped with record	OD	7.2	2	Built
VAC-005	Unassigned work queue and bulk reassignment	DC	7.2	2	Built
VAC-006	Recruitment screen listing all approved requests / vacancies	OB	7, 24	2	Built
ADV-001	Ads per platform generated from JD templates, copyable	OB	7.3	3	Built

ID	Requirement	Source	Section	Phase	Status
ADV-002	Apply link per ad with automatic source attribution	DC	7.3	3	Built
SRC-001	Source mandatory per application, with sub-source	OD	8	3	Built
SRC-002	Subscriptions: credits, usage, expiry and unused-credit alerts	OD	8	3	Built
SRC-003	Referral attribution lock; agency terms	DC	8	3	Built
CAN-001	Person master; candidate ≠ application; duplicate warning, no auto-merge	DC	9.1	3	Built
CAN-002	Hybrid journey; recruiter acts on behalf with audit	OD	9.2	3	Built
CAN-003	Online application intake	OB	9.3	3	Built
CAN-004	Privacy notice acceptance stored with version	DC	9.3	3	Built
CAN-005	Salaries required with disclosure states; never zero	OD	9.3	3	Built
CAN-006	National ID optional at application	OD	9.3	3	Built
CAN-007	Bulk import of 50–100 rows with duplicate review and batch ID	OD	9.5	3	Built
CAN-008	Hybrid talent pool	OD	9.5	3	Built
CAN-009	Former employee detection and hiring restriction	DC	9.1	3	Built
SCR-001	Knockout flags for human review; AI evidence-only	DC	10.1	3	Built · 0.10 · 0.31 — Knockout flags reviewed by a person (phase9). AI CV reading (0.31) gives suggestions only: fields the recruiter picks, a summary and a 1–5 job-related match; it never moves or rejects a candidate (phase31, ui35).
SCR-002	Coded rejection reasons; internal reason separate from message	DC	10.1	3	Built
ACT-001	Recruiter activity log: calls and manager discussions summarized, multi-reference, no silent edits	OD	10.2	3	Built

ID	Requirement	Source	Section	Phase	Status
ACT-002	Action queue with next action per application	DC	10.3	3	Built
COM-001	Message templates; copy-paste for WhatsApp	OB	10.4	3	Built
COM-002	Rejection message by WhatsApp or email as an explicit step	OB	10.4	3	Built
ASM-001	Practical / technical assessment stage	OD-30S	12	4	Built
INT-001	Candidate invite blocked until manager confirms	OD	11.1	4	Built
INT-002	Manager screen of interview dates and locations	OB	11.1	4	Built
INT-003	Reminders and optional reconfirmation	DC	11.1	4	Built
INT-004	Check-in, waiting timer, evidence trail of interviewer activity	OD	11.2	4	Built
INT-005	Interview plan, panel roles, waiver with reason	DC	11.3	4	Built
INT-006	Interviewer workspace shows the JD	OB	11.4	4	Built
INT-007	Question bank; HR standard questions shown in HR interview	OB	11.5	4	Built
INT-008	Evaluation entry for HR, direct and higher manager; structured, independent	OB	11.6	4	Built
INT-009	Live comparison page; continuous pipeline; decision readiness	OD	11.7	4	Built
INT-010	SLA on confirmation and evaluation with escalation	DC	18	4	Built
OFF-001	Offer sent by email from the system or printed	OB	13.5	5	Built
OFF-002	Offer authority by salary band; HR Manager above max	OD	13.3	5	Built
OFF-003	Basic + allowances; incentives / commissions in system, not in offer	OD	13.2	5	Built
OFF-004	Offer versions and negotiation with reapproval	DC	13.5	5	Built
OFF-005	Offer Valid Until and audited extension	DC	13.5	5	Built

ID	Requirement	Source	Section	Phase	Status
OFF-006	Five-figure salary trail	DC	13.4	5	Built
OFF-007	Decline reasons, over-hiring warning, reserve candidates	DC	13	5	Built
JOI-001	Joining date agreed after acceptance, with history	OD	14.1	5	Built
JOI-002	Did-not-join tracked with reasons	DC	14.1	5	Built
DOC-001	Upload by employee or HR, HR review, physical receipt	OD	14.2–14.3	5	Built
DOC-002	Deferred documents with approver and due date; HR alerts only	OD-30S	14.4	5	Built
FIL-001	Electronic employee file with document versions and expiry	OD	15	6	Built
ONB-001	Orientation with separate manager and HR screens	OB	16	6	Built
ONB-002	First-day welcome gift	OD	16	6	Built
ONB-003	30-day New Hire Voice with confidentiality	OD	16	6	Built
INS-001	Social insurance case within the first month	OD	17.1	6	Built
PRB-001	Probation checkpoints, log (incl. Behavior / Safety), final evaluation, reminders	OB	17.2	7	Built
INS-002	Medical insurance after successful probation	OD	17.3	7	Built
RPT-001	Status report per request; log of calls, appointments, no-shows	OB	18	2–8	Built
RPT-002	Role dashboards; drill-down KPIs	DC	18	8	Built
AUD-001	Audit: who, what, when, before, after	DC	22	1	Built
AUD-002	Controlled overrides instead of admin bypass	DC	1	1	Built
WAG-001	No wage or payroll action anywhere in the system	OD-30S	1, 14.4	All	Built

ID	Requirement	Source	Section	Phase	Status
MOV-001	Vacancy fill method recorded (External Hire / Internal Transfer); an internal fill counts in Joined HC with employee, source position and effective date	OD	7.4	2	Built
MOV-002	Internal candidates in the pipeline (source Internal), current manager notified before the first interview	OD	7.4	3	Built
MOV-003	Transfer process: raised by any manager or HR, other manager's opinion (no veto), HR Manager final decision, HR Sector Manager when terms change; HC check on the target position	OD	7.4	6	Built
MOV-004	On the effective date: position and Occupied HC move on both sides, linked vacancy updated, history written, replacement request offered to the releasing manager	OD	7.4	6	Built
BRD-001	Board approval (Chairman or Vice Chairman — either one) after the CEO for: positions reporting directly to the CEO, every new structural position, jobs/units under a temporary board rule, and any request the HR Sector Manager sends to the board; HR Sector Manager may record the board's decision on its behalf with the external method and a note	OD	6	2	Built

30. Open items and change control

Phase 1 build can start now with a test structure and 3–4 test users; the rest are needed before the phase listed.

#	Open item	Needed from	Needed before
1	Org structure file to the last level (every position defaults to HC = 1)	HR	Phase 1 go-live

#	Open item	Needed from	Needed before
2	Payroll sheet column headers (no salary values) — only when the payroll link is built	HR	Later phase
3	3–4 test users now (owner, one manager, one HR); full list (~40 managers + 5 HR) added later from the Users screen	HR	Phase 1
4	Do Recruitment Supervisor / Recruitment Manager roles exist today, or skip to HR Manager?	HR Sector Manager	Phase 2
5	CEO standing rules currently in force (jobs / departments / dates)	HR Manager	Phase 2
6	Priority weights and aging bands; SLA targets	HR Manager	Phase 2
7	Assessment data: which jobs have practical tests, assessors, pass criteria (system built and configurable in v0.12.0 — criteria taken from JDs meanwhile; data entry deferred by owner until the whole program is finished)	HR + production managers	After all phases are built
8	Question bank for priority jobs; competency levels	HR	Phase 4
9	Salary structures per grade and offer authority thresholds	HR Sector Manager	Phase 5
10	Document requirement matrix by job category	HR	Phase 5
11	Probation checkpoint days (rules settled 2026-10-05: max 3 months, once per employer — the 4 entities are one employer, stated in the contract)	HR	Phase 7

#	Open item	Needed from	Needed before
12	Legal validation: privacy-notice wording and data retention under Egyptian personal-data law (draft in progress); keeping original documents; payroll stop notice for missing documents; social insurance start later than day one (owner rule CHG-52). Probation rules settled by owner.	Legal	Phases 3, 6, 7
13	Google quotas (email, triggers, runtime) confirmed for the account used	Build team	Phase 1
14	Closed 2026-10-05: STEPS not approved — employee file, insurance, probation and medical insurance stay in this portal; a full HR system will be built with Claude in a separate later phase	HR Sector Manager	Phase 6

Change control:

1. Every new or changed requirement gets a REQ ID, source, date, owner and blueprint section in section 29 before any code.
2. Chat discussions alone never change the build; the blueprint changes first, then the code.
3. Each release lists the REQ IDs it delivers and moves their status to Built, then Tested.
